

All Coins. One Platform.

An in-depth solution to solve the liquidity problem

STeX.Exchange is the first cryptocurrency exchange with automated liquidity aggregation powered with innovative A2A technology, where you can change ANY listed coin to ANY other listed coin in one trade directly.

The Problem

The cryptocurrency world has experienced such an enormous and explosive growth in recent years that no existing crypto exchange is capable of managing it. One coin is trading on one exchange - another coin is on another, but there is no one single place for all coins. STeX is providing that one place with a platform to trade all existing coins, we know exactly how to make this a reality.

1.1 The liquidity problem

Many coins and tokens suffer from one big problem – a lack of liquidity. This leads to enormous implications for active traders/investors. No known exchange shows the calculations about available volume at a specific price, this is valuable information for high net investors. Without this information, a reasonably large investor cannot make a truly informed decision. The scourge of the modern exchange is terrible liquidity. This is exactly where we deploy our private algorithms and technical solutions - to solve this problem.

> Have you tried to switch between coins, following trends in emerging tokens ?

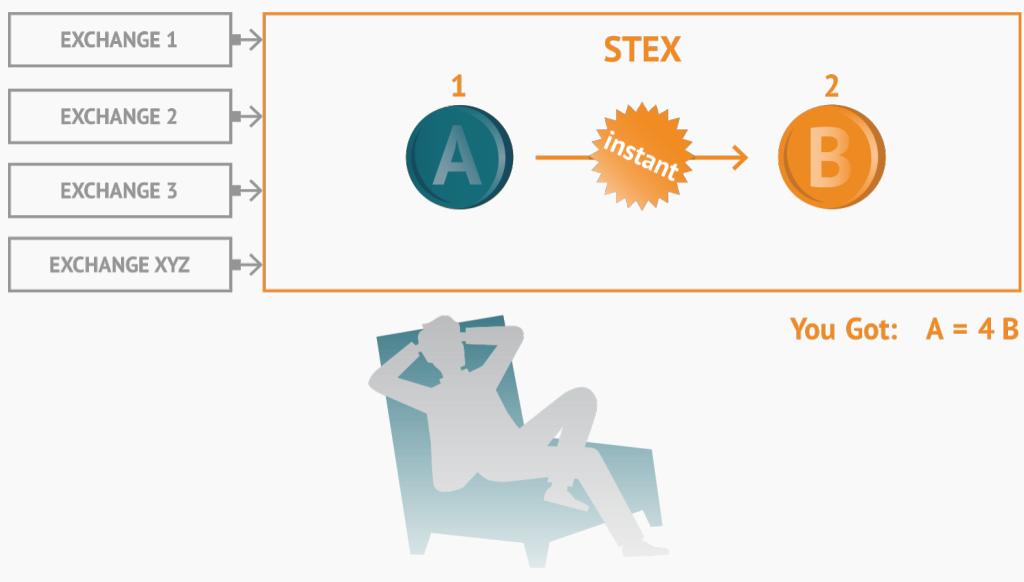

1.2 Missed opportunities

Imagine, you have *coin A* and a nice opportunity to sell it at a profit and at the same time, you wish to invest in a new promising token - *coin B*. The only problem: they are traded (or have the best rates) in different exchanges. To take advantage of the opportunity you must finish the first trade, then transfer your assets from one exchange to another - wasting days and (the world is fast nowadays, remember?) potentially missing the brilliant opportunity to raise money - all because of current market insufficiency.

The Solution

2.1 Solving the liquidity problem

With our unique HFT algorithms, originally developed to work on traditional stock exchanges, we can solve this problem: providing access to all trading possibilities from one trading platform and one trading account - in the blink of an eye.

2.1.1 Liquidity aggregation

One of our solutions to solve the liquidity problem is to aggregate offers from many other exchanges in one place. Big orders will be executed on STeX at better prices thanks to the automatic collection of all of the best offers from various exchanges.

2.1.2 Liquidity pool creation (collected on ICO)

One of the main reasons to collect more funds during ICO is the ability to strengthen the project's own liquidity pool. This means that a significant amount of cryptocurrency will be available as bid and ask offers on the STeX exchange from the very beginning - with fast execution, managed by STeX's proprietary market-making algorithms.

2.1.3 Market-makers

On top of that, STeX will be offering direct access through fast API protocols to those who want to become market-makers on the STeX exchange, allowing them to trade without any commission. For all such trades, commissions will be taken from a counterparty willing to buy or sell at the offered price.

2.1.4 Out-of-the-box MM for every user

On top of the aforementioned which we believe is able to provide more than enough liquidity - we are also going to make it quick and easy for every user on STeX to contribute and profit from the already installed market-making algorithm. Several pre-defined presets for different strategies will be available and ready to use - all you need to do is to specify the amount that you wish to invest in this strategy and express your market view, if any (optional).

> If any two coins are listed on STeX, you can trade one against the other directly

2.2.1 Built-in cross rate support

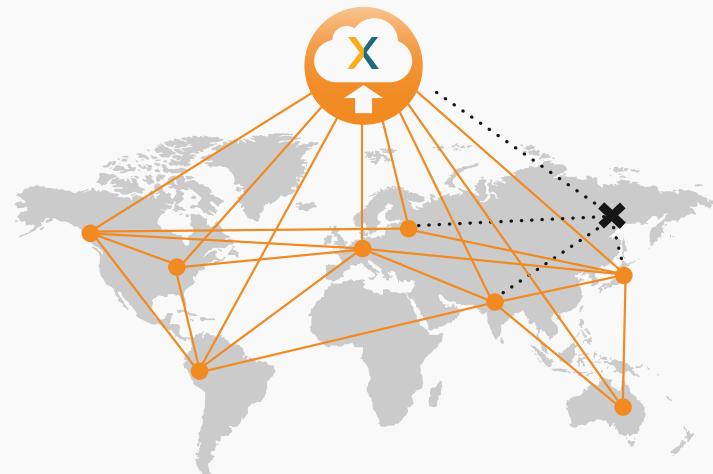

Our special A2A decentralized technology gives STeX the ability to support hundreds of thousands of cross rates simultaneously - an ability no other exchange has at the moment. More importantly, this means full featured support - including a much wider variety of trading abilities such as; trailing stop loss orders, take profit orders, charts and much more. All of the features you find on STeX will be available across any trading pair, too.

No more missed opportunities! Switch between any altcoin immediately and pick up all of the profits!

The Technology

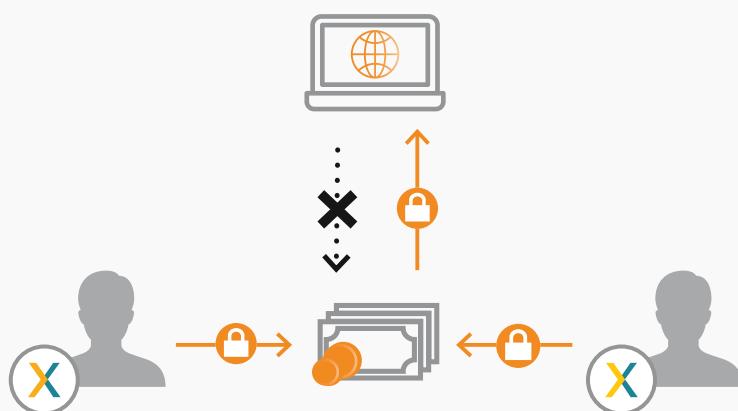

3.1 Decentralization

STeX's own cloud cluster is physically hosted in many countries to prevent the possibility of downtime due to real-world/technological attack or failure.

3.2 Crypto-security

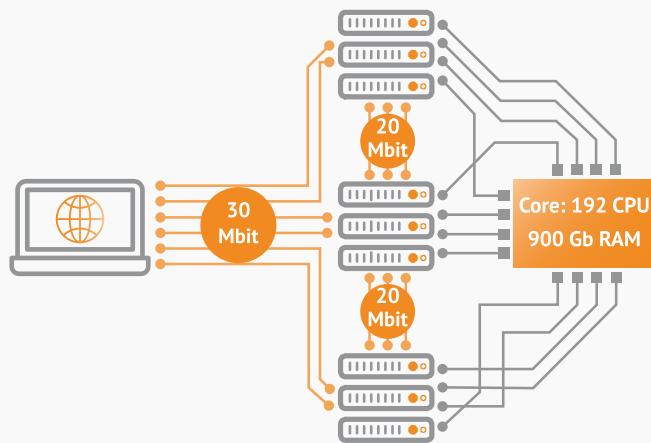

All STeX systems are encrypted and cannot be accessed without proper authorisation from STeX.

The project's main funds - including user's funds - are stored in cold wallets, not vulnerable to online attacks.

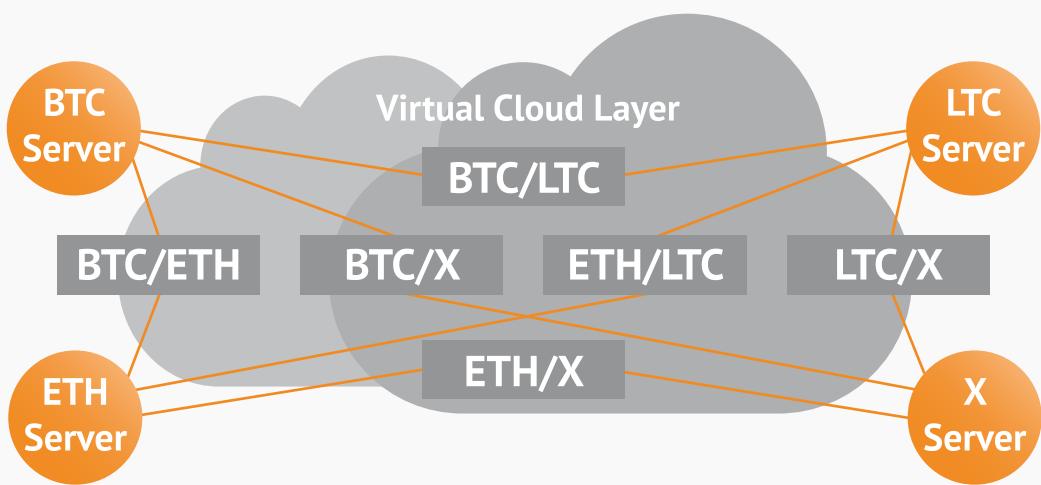

3.3 Speed

Superfast cloud processing core - internal trades are completed in the blink of an eye.

3.4 Horizontal scaling

Our A2A decentralized technology allows us to support thousands of cross rates simultaneously.

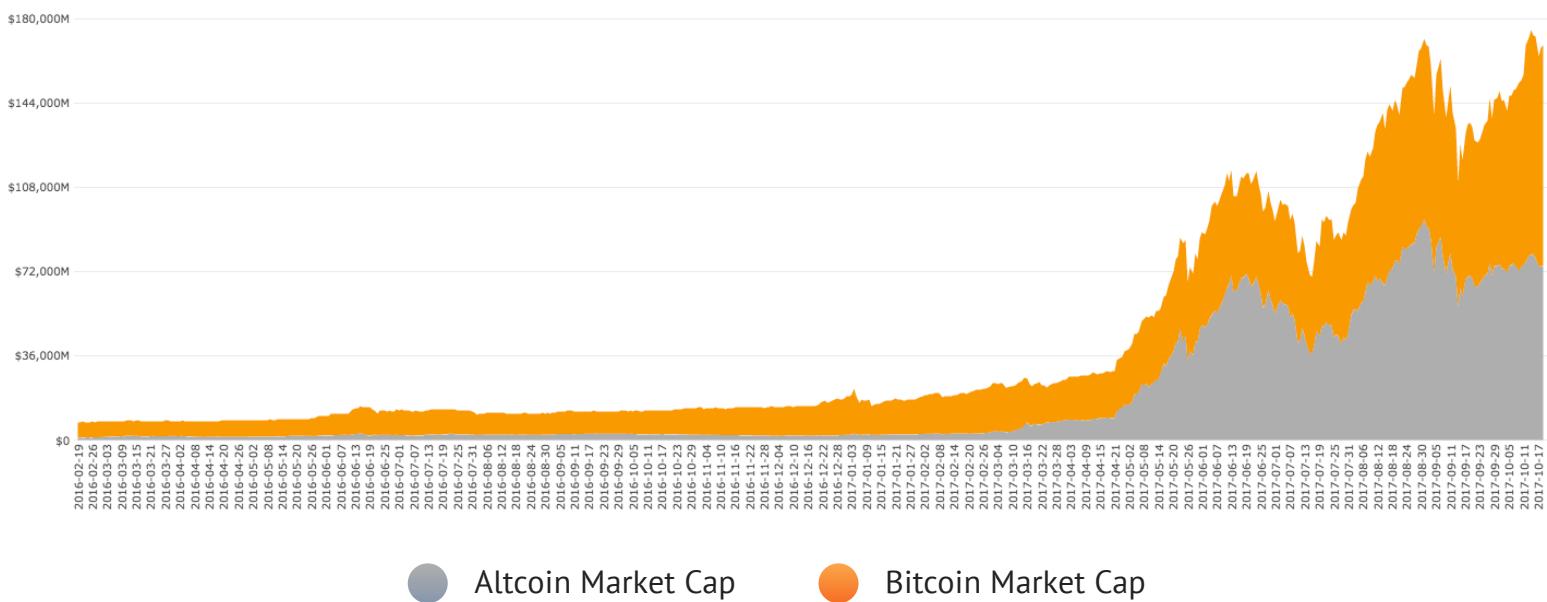

> Behind our system lie years of experience in trading on the world's largest stock exchanges and countless hours developing trading algorithms for private hedge-funds and brokers.

This unique combination of understanding end-user needs, knowledge of how to build infrastructure capable of delivering services to millions of users, teamed with sophisticated HTF market-making algorithms - ensures that the project will be successful while being difficult to imitate, if someone wishes to compete.

4

Market analysis

Cryptocurrency Market Caps (Historical) coin.dance

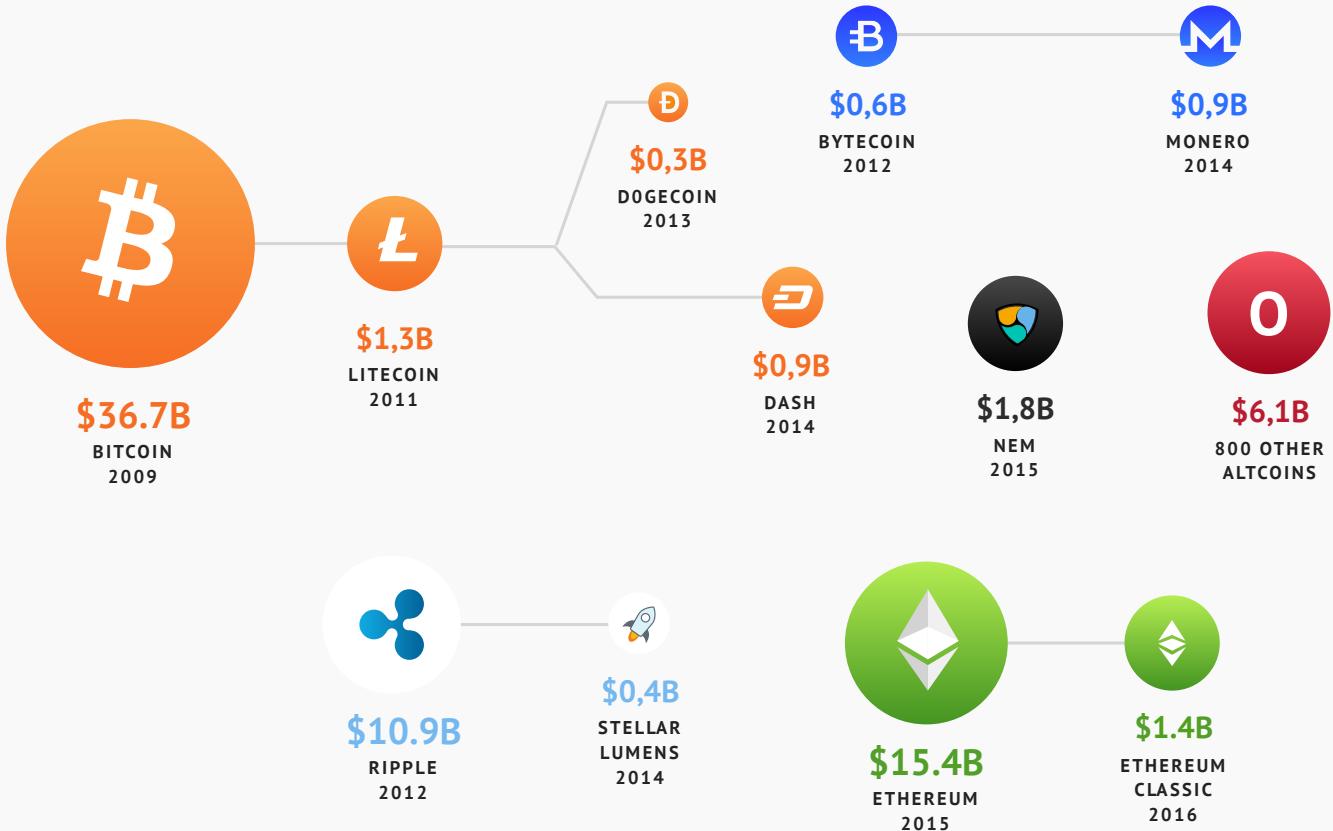

Since 2012, the cryptocurrency market has been picking up speed, ramping up exponentially within the past 3 years.

4.1 Current metrics

At the time of writing the market capitalization for all cryptocurrencies is at \$168.72 billion and there are approximately 330k confirmed transactions per day, with some predicting a possible increase to a \$200 billion market cap by the end of 2017.

As of October 2017 between \$1 and \$4 billion is traded through cryptocurrency exchanges daily. While it is difficult to pinpoint exactly how many traders are currently out there, a global cryptocurrency benchmarking study by the Cambridge Centre for Alternative Finance representing roughly 75% of the industry, estimates that there are at least 3 million people actively trading Bitcoin today - while data from other sources, such as Coinbase and ARK Research, estimate that there are between 10-14 million Bitcoin owners worldwide.

The Cryptocurrency Universe

Altcoins now account for around 50% of the worldwide cryptocurrency market capitalization. As of January 1st 2017, the Altcoin market cap was at around \$2.18 billion, rising 34 times to \$74.39 billion as of October 2017. The Bitcoin market cap rose to \$94.34 billion from \$16.28 billion - rising just under 6 times in the same period.

The market continues to evolve. It now requires a single platform that will allow high liquidity for a variety of crypto assets as well as efficiently provide an interoperable trading environment - saving on time and compounding fees from multi-step trades. We plan to satiate this need by offering 10,000 trading pairs across the top 100 cryptocurrencies at launch on one platform - all with the lowest rates available.

4.2 Projections

While it is extremely difficult to predict the growth of the cryptocurrency market, 2017 has been a demonstrative year in the growth potential of cryptocurrencies as inventive blockchain solutions, innovative DAOs and awareness of smart contract applications in the real world continue to drive momentum.

According to an analyst at Saxo Bank, the Bitcoin market cap could hit 1.75 trillion in 10 years, with its price reaching \$100,000. The estimate is that cryptocurrencies will account for 10% of the average daily trade volume of all fiat trade by 2027. Foreign exchange ADV currently stands at \$5 trillion and we can follow growth estimates to assume that cryptocurrencies could account for \$500 billion by that time.

Average daily trading volume in 2017: \$2.1 Billion

Projected daily trading volume in 2027: \$500 Billion

Competitors

Through the extensive and ongoing analysis of either direct competitors, similarly featured platforms or exchanges with the highest trading volume for the last 6 months - we have been able to gain insight into what works for successful exchanges and what the expectation and community feedback is regarding desired features, incorporating these into the STeX development cycle to stay competitive and relevant.

This undertaking has given us great understanding of the perceived 'ideal trading platform', allowing us to work towards perfecting our offering and meeting the crypto community's needs.

5.1 List of competitors

From our own collective experience as traders and from research into product whitepapers, public opinion and promotional materials - we have narrowed down what we think are the most relevant strengths, weaknesses, threats and differentiators (USPs) for each of our competitors.

The list collated here is a mix of decentralized, hybrid and centralized exchanges with varying service offerings and product features.

Some of the most compelling features of the fastest growing and most innovative cryptocurrency exchanges of recent times - include being decentralized/offering 'trustless' trading, having a high liquidity pool or access to fast order processing.

Unfortunately, many of these features are seemingly mutually exclusive across competing exchanges. We are proud to be working closely with industry experts and the growing STeX community alike, to incorporate these much desired features into one system for the STeX project.

5.1.1 Top 10 analysis: jurisdiction, number of coins, number of pairs, fiat D/W, AML/limits, commissions

Hybrid - Combining the speed centralized exchange with the secure account management of a decentralized one.

No. of coins: over 100
Trading Pairs: over 10,000
Fiat Deposit / Withdrawal: No
AML Limits: None
Deposit Fees: No
Withdrawal Fees: No
Trading Fees: 0.2%

Listed conditions are subject to change in case of market conditions, competitors actions, AML rules, etc.

Strengths	Weaknesses
<ul style="list-style-type: none"> - Speed & security - All trading pairs, one platform - Best rates, aggregated from other exchanges -built in tarding robots -most advanced API for algo-trading -another exchanges' API supported for the old robots -simple separate interface for the newbies 	<ul style="list-style-type: none"> - Our contingency funds and 'survival mode' will have to be deployed if we are unable to gain significant market share
Threats	Differentiators
<ul style="list-style-type: none"> - If the crypto market stagnates or declines - If crypto/exchanges face worldwide regulation 	<ul style="list-style-type: none"> - Exchange aggregation - Lowest rates, highest liquidity

EtherDelta (Decentralized)

Jurisdiction: Blockchain
No. of coins: 148
Trading Pairs: 667
Fiat Deposit / Withdrawal: No
AML Limits: None
Deposit Fees: 0.0001 - 0.0003 ETH
Withdrawal Fees: 0.0001 - 0.0002 ETH
Trading Fees: 0.0002 - 0.0003 ETH

Strengths	Weaknesses
<ul style="list-style-type: none"> - Transparency - No registration required - Secure & limitless 	<ul style="list-style-type: none"> - High trading costs - Non-instant trades - Thin order books

Threats	Differentiators
<ul style="list-style-type: none"> - Fees and features not competitive with other exchanges - No innovative technology to boost liquidity 	<ul style="list-style-type: none"> - Trustless trading - Open source and verifiable

KYBER NETWORK (Decentralized)

Jurisdiction: Singapore
No. of coins: 'Popular and high volume coins'
Trading Pairs: Supporting many arbitrary pairs will require many funds in reserve.
Fiat Deposit / Withdrawal: No
AML Limits: KYC Compliant
Deposit Fees: N/A (P2P transactions)
Withdrawal Fees: N/A (P2P transactions)
Trading Fees: No

Strengths	Weaknesses
<ul style="list-style-type: none"> - Good advisory board/partnerships - Proxy / cross chain payment 	<ul style="list-style-type: none"> - Requires high participation from reserve providers to enable high liquidity. - Q1 2018 Initial release features only 5-10 tokens from a single central reserve

Differentiators
<ul style="list-style-type: none"> - Trustless - Instant on-chain order fulfilment

5.1.1 Top 10 analysis: jurisdiction, number of coins, number of pairs, fiat D/W, AML/limits, commissions

BINANCE (Centralized)

Jurisdiction: China
No. of coins: 35
Trading Pairs: 64
Fiat Deposit/ Withdrawal: No
AML Limits: 2 BTC daily limit for non-verified accounts, 50 BTC daily limit for accounts enhanced verification.
Deposit Fees: No
Withdrawal Fees: 0 - 0.6%
Trading Fees: 0.01%

Strengths
- Strong online community
- Solid team with track record
- No fiat (bypassing current legislation)

Threats
- Change in legislations

Weaknesses
- Limited pairing
- No stop loss
- Low trade volume

Differentiators
- Trustless
- Fast order fulfilment thanks to innovative infrastructure

BITTREX (Centralized)

Jurisdiction: USA
No. of coins: 200
Trading Pairs: 537
Fiat Deposit/ Withdrawal: No
AML Limits: Two account types. Limits are between 3 BTC and 100 BTC depending on level of identity verification, enhanced requiring public record verification and scans for proof of address.
Deposit Fees: No
Withdrawal Fees: No
Trading Fees: 0.25% of trading profits

Strengths
- Holders of New York's 'bitlicense' (legally compliant with local legislation)
- Extensive trading pairs
- Easy to use

Threats
- Loss of user base from bad PR

Weaknesses
- Mixed user experience
- Service restrictions to some regions
- Long verification process or not accepting new users at all
- Overloaded
- shows delayed data in the interface most of the time

Differentiators
- Algorithmic trading

BITFINEX (Centralized)

Jurisdiction: Taiwan
No. of coins: 20
Trading Pairs: 44
Fiat Deposit/ Withdrawal: No - Pressure from Taiwanese banks
AML Limits: Limitless fiat withdrawals are AML, KYC and CTF compliant requiring government ID and proof of address.
Deposit Fees: No
Withdrawal Fees: No
Trading Fees: 0 - 0.2%

Strengths
- OTC services
- Margin/leveraged trading
- Mobile app

Threats
- Multiple hacks reducing user confidence in service

Weaknesses
- Limited tokens and pairs offered
- Slow/expensive fiat depositing option
- Restrictions on some countries

Differentiators
- Variety of order types

OKCOIN (Centralized)

Jurisdiction: China
No. of coins: 5
Trading Pairs: 15
Fiat Deposit/ Withdrawal: Yes
AML Limits : \$50,000 maximum daily cap requiring photo id and proof of residence for higher tiers. \$10,000 or more in deposits may be subject to enhanced due diligence checks.
Deposit Fees: No
Withdrawal Fees: 0.01%, minimum \$15
Trading Fees: 0.05 - 0.2%

Strengths
- Advanced security measures
- Advanced order types
- Good liquidity

Threats
- Legislation change in China
- Allegations of price/volume manipulation

Weaknesses
- Limited tokens and pairs offered
- Limited support internationally

Differentiators
- Leverage management tools

5.1.1 Top 10 analysis: jurisdiction, number of coins, number of pairs, fiat D/W, AML/limits, commissions

BITSTAMP (Centralized)

Jurisdiction: Slovenia / UK

No. of coins: 4

Trading Pairs: 12

Fiat Deposit/ Withdrawal: Yes

AML Limits: No limit requiring proof of ID and residence, conforming to AML legislation in the regions in which it operates.

Deposit Fees: No

Withdrawal Fees: No

Trading Fees: 0.25 - 0.1%

Strengths

- No trading or d/w limits
- Mobile application
- Fast service

Threats

- May fail to retain users as more competitive exchanges enter the market
- Banks sometimes do not accept transfers from Bitstamp because of not proper license for crypto

Weaknesses

- Limited tokens and pairs offered
- Mixed user reviews
- High fees

Differentiators

- The oldest and most stable exchange

COINBASE (Centralized)

Jurisdiction: USA

No. of coins: 3

Trading Pairs: 9

Fiat Deposit/ Withdrawal: Yes

AML Limits: \$10,000 maximum daily cap, with greater limit allowances requiring photo id, proof of address and government ID.

Deposit Fees: Yes

Withdrawal Fees: Yes

Trading Fees: 1% Fixed

Strengths

- Current largest Bitcoin broker
- Fast fiat conversion

Threats

- Strict conformity to governmental legislation and traditional banking systems

Weaknesses

- Limited tokens and pairs offered
- Very stringent KYC/AML procedures

Differentiators

- High liquidity in ETH, BTC and LTC markets

KRAKEN (Centralized)

Jurisdiction: USA

No. of coins: 25

Trading Pairs: 73

Fiat Deposit/ Withdrawal: Yes

AML Limits: 3 tiers of withdrawal limits based on clearing different 'tiers' of verification, ranging from \$20k-\$200k monthly, requiring photo id, government id and proof of address for the highest tier.

Deposit Fees: Yes, in some cases

Withdrawal Fees: Yes

Trading Fees: 0 - 0.26%

Strengths

- Holders of New York's 'bitlicense' (legally compliant with local legislation)
- Extensive trading pairs
- Easy to use

Weaknesses

- Mixed user experience
- Service restrictions to some regions
- Long verification

Threats

- Loss of user base from bad PR

Differentiators

- Algorithmic trading

EIDOO (Hybrid)

Jurisdiction: Switzerland

No. of coins: Bitcoin, Ethereum

Trading Pairs: Undisclosed

Fiat Deposit/ Withdrawal: Yes

AML Limits: Must conform to AML / KYC regulations.

Deposit Fees: Competitive

Withdrawal Fees: Competitive

Trading Fees: Competitive

Strengths

- Embedded token system (funding)
- User-friendly wallet app

Weaknesses

- A 'jack of all trades' solution that doesn't have pro-spec exchange functionality

Threats

- Many partnerships and 3rd parties will be relied on to provide full functionality, any of which could fail or halt services

Differentiators

- Combined wallet & exchange features
- Cross-chain trades

5.2 Comparison with STeX

	Futures	Margin Trading	Derivative	Hedge Funds	Trading Pairs	Liquidity	Pros	Cons
STEX Hybrid	●	●	●	●	>10000	Highest possible	<ul style="list-style-type: none"> - Lowest possible bid/ask spreads in the industry - Bid/ask size automatic calculation - Stop/limit/conditional orders - Best prices available across other exchanges 	<ul style="list-style-type: none"> - Restricts US and Hong Kong citizens because of SEC and SFC regulation
KYBER NETWORK Decentralized	●	●	●	●	n/a	Good	<ul style="list-style-type: none"> - High Liquidity - Fast exchange - Good team and advisory board 	<ul style="list-style-type: none"> - Requires good participation from reserve providers to enable high liquidity - Limited tokens on release
BINANCE Decentralized	●	●	●	●	64	Industry Average	<ul style="list-style-type: none"> - Fast order processing - Multi-language support - All major coins available 	<ul style="list-style-type: none"> - Lower trade volume comparatively - Few available order types
ETHERDELTA Decentralized	●	●	●	●	325	Low	<ul style="list-style-type: none"> - Limitless trading - No registration/censorship protection 	<ul style="list-style-type: none"> - Low liquidity - Lacks advanced features
BITSTAMP Decentralized	●	●	●	●	60	Industry Average	<ul style="list-style-type: none"> - Supported by crypto community - Several payment options available - Focus on privacy 	<ul style="list-style-type: none"> - Low trading volumes - Slow transaction speed - Not designed for active trading - User experience mostly aimed at coders/devs
QVOLTA Decentralized	●	●	●	●	4	Industry Average	<ul style="list-style-type: none"> - Low trading volumes - Liquidity will be low until exchange picks up momentum 	<ul style="list-style-type: none"> - Well designed platform - Low commissions - Fast conversions
SPECTRE Decentralized	●	●	●	●	n/a	Good	<ul style="list-style-type: none"> - Transparent environment - Strong personnel - Broker-less trading 	<ul style="list-style-type: none"> - Liquidity is dependant upon ICO soft-funding target being reached - Does not facilitate 'coin-to-coin' trades - Reliability on Ethereum blockchain (transaction speeds)
EIDOO Hybrid	●	●	●	●	n/a	Good	<ul style="list-style-type: none"> - Multi-currency/asset wallet - Debit Card accepted - Supports all ERC20 tokens 	<ul style="list-style-type: none"> - Lack of focus - an 'all-in-one' platform that may have missing exchange functionality for pro traders
BITTREX Centralized	●	●	●	●	537	Below Average	<ul style="list-style-type: none"> - Large number of trading pairs - High volumes 	<ul style="list-style-type: none"> - Long verification/support ticket time - Mixed user reviews
BITFINEX Centralized	●	●	●	●	44	Industry Average	<ul style="list-style-type: none"> - High USD Liquidity - Low Fees - All order types and margin trading 	<ul style="list-style-type: none"> - Not a transparent company - Reputation loss due to hack
OKCOIN Centralized	●	●	●	●	13	Industry Average	<ul style="list-style-type: none"> - Easy layout and functionality - Good liquidity - Futures & leverages on LTC/BTC 	<ul style="list-style-type: none"> - The Chinese crypto market is under increased scrutiny/regulatory changes
BITSTAMP Centralized	●	●	●	●	12	Below Average	<ul style="list-style-type: none"> - Good reputation - Easy and quick to use 	<ul style="list-style-type: none"> - Supports only BTC/FIAT trades - Negative user experiences reported - Higher fees if you are trading low - Hacked Jan 2015
COINBASE Centralized	●	●	●	●	9	Industry Average	<ul style="list-style-type: none"> - Newbie friendly - Integrated debit/credit cards 	<ul style="list-style-type: none"> - Major user privacy violations - Puts investors before customers
KRAKEN Centralized	●	●	●	●	73	Industry Average	<ul style="list-style-type: none"> - High liquidity in EUR markets - Margin trading supported 	<ul style="list-style-type: none"> - Slight volume lag in BTC/USD - Weak support for mobile platforms - No "advanced" orders (stop-loss etc.) - Has uptime problems when market gets hot

5.3 Competitive Advantages

The STeX system is built in such a way as to enable it to co-exist with other exchanges, creating a symbiotic relationship where a 3rd party exchange will benefit from STeX's utilization of its markets, through its own fee structure.

We are therefore not in direct competition with traditional crypto exchanges and actually help to strengthen their trading volume and liquidity.

STeX.exchange provides:

- Real-world financial instruments never before seen in crypto exchanges
- The highest liquidity of any cryptocurrency exchange
- The best rates available, aggregating from all major exchanges
- 10,000 cross rates between the top 100 coins in Beta release
- Access to advanced order types and intuitive trade automation tools
- ‘Trustless’ trading - our exchange managers have 0 access to your account funds

A proven track record across our team/advisory board and a historical competence in providing market leading products prove our competence around complex issues of scalability, security and data management - all of which have been addressed as part of an extensive R&D process over the past 18 months.

Here, we illustrate a direct comparison between STeX and Binance, whose success in gaining market share through optimization of user experience, integration of high performance order settlement technology and promotions for zero fees has earned them significant market share within a short time span, something we are looking to emulate with our offering.

Direct comparison with Binance

	Binance	STeX	Evaluation
Founders / team members	Successful entrepreneurial experience, a wide network in the crypto community	Successful entrepreneurial experience, has done large-scale systems, traditional financial background	On par
Worldwide availability	Available worldwide	Available worldwide	On par
Currencies	Dozens of tokens supported	over 100 most popular tokens	STeX - winner
Trading fees discount	Reduce trading fees by 50% using token	Reduce trading fees by 50% using A2A token Special commission-free order types for all users	STeX - winner
Financial instruments	No	Futures, margin trading, options, etc	STeX - clear winner
Liquidity	Good	Automatic exchange aggregation patterns, liquidity excellent	STeX - winner
Multilingual	Language support for all major languages	All major languages will be supported	On par
Exchange	Has been operating for three months	2018 Q1 Alpha release	Binance

6

Road Map

August, 2017
Crowdfunding

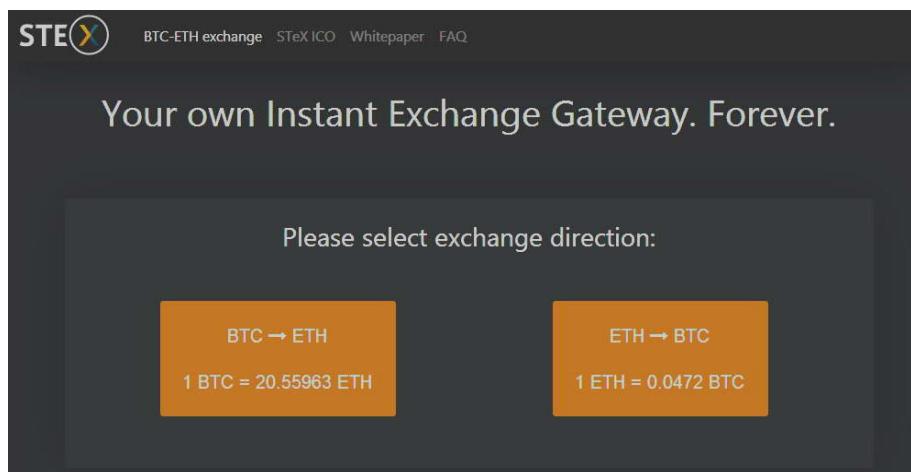

We have already created a new concept of exchange system and basic market-making algorithms, differentiating our project from any other in the current market. The key advantage of the STEX platform are our HFT algorithms - uniquely positioning us to provide more liquidity on a coin-to-coin exchange than has ever been seen from a single platform. The result of which for the end user will be much narrower spreads between buy and sell offers, and the ability to trade much larger amounts from a single trading account. Our DEEP blockchain visualizer and AML/KYC investigation tool was released on August, 23rd - [deep.stex.exchange](#)

September, 2017
Crowdfunding hard capped at 15,000 ETH

Crowdfunding reached the maximum limit of 15,000 ETH

October, 2017
Modules development

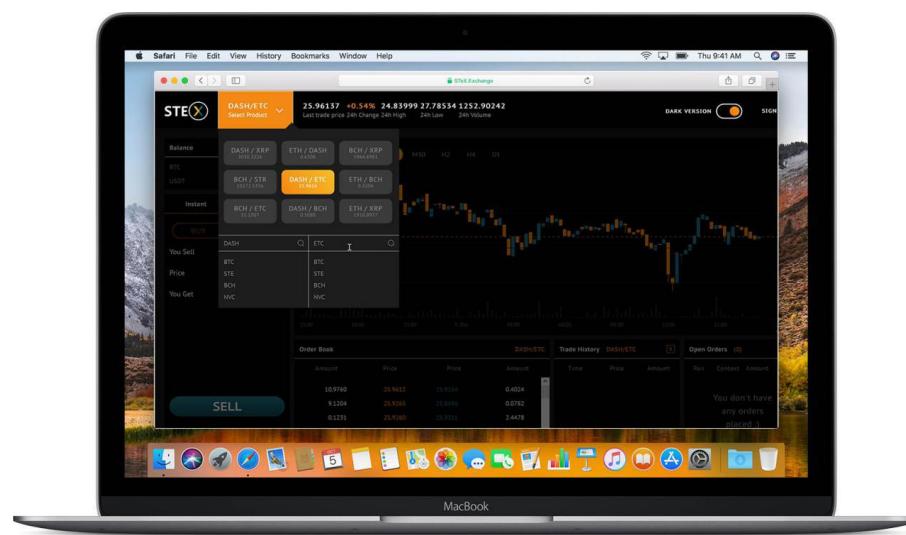

November, 2017
Crowdfunding stage 2

December, 2017
Alpha development

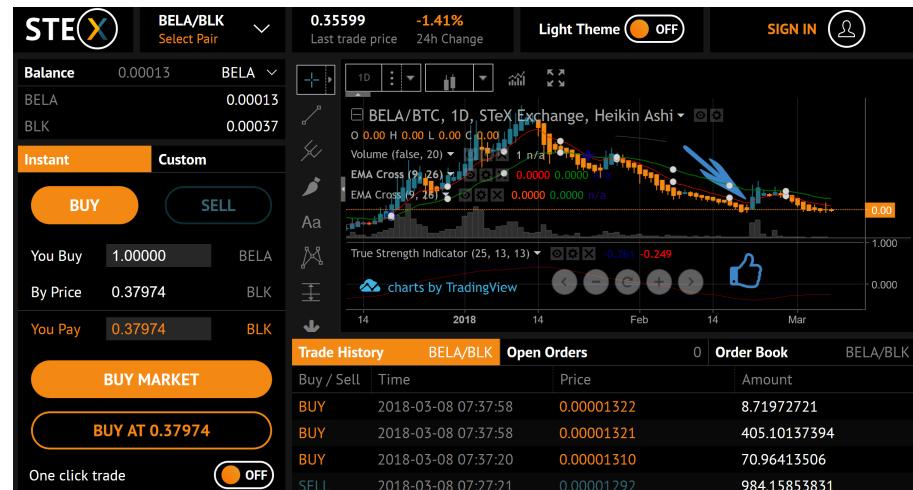

February, 2018
Front-end Production

A separate module of the STeX system was developed and released as a fully functional additional service at gateway.SteX.exchange - an Instant Exchange Gateway. An improved whitepaper was published and official explainer videos have been released. All systems are revised and corrected according to advisors and community feedback.

High speed API, internal algorithms and protocols are ready. Crowdfunding stage 2 starts.

Within the next two months the system's core with all the algorithms will be ready and tested under load. At this stage we will also invite users to join STeX testers program.

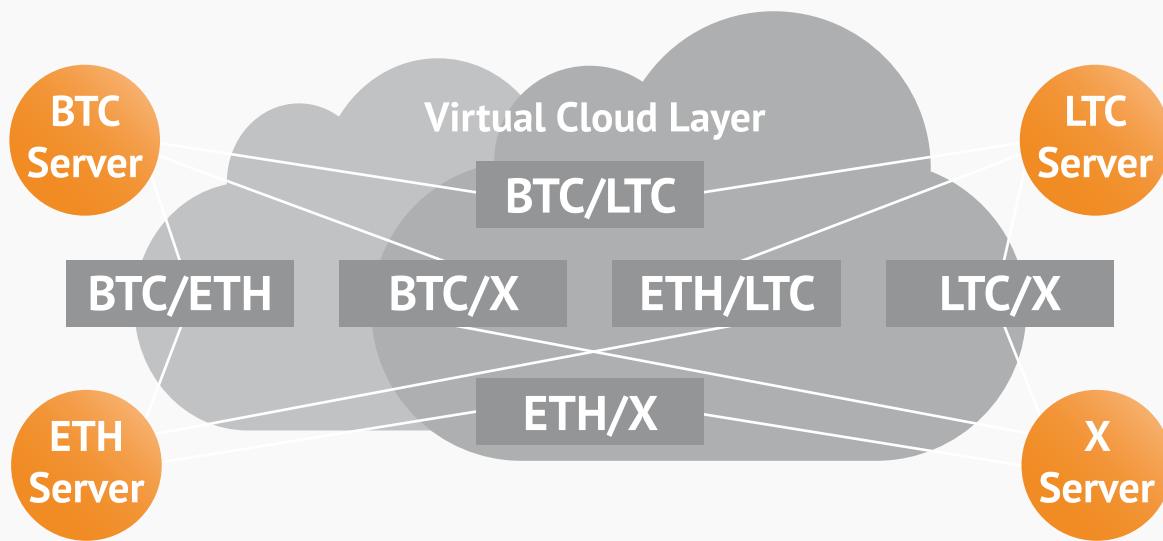

New adaptive layout interface has been developed. The internal modules development has been completed, 20 main blockchains was connected to the system using STeX's own nodes. The final stage of the development has begun.

-
- March, 2018**
- STeX Exchange Alpha release is scheduled to March 27, 2018 14:00 GMT. Users can sing up and trade on the exchange. Mobile interface development in progress. Public API development in progress.
- April 5, 2018
A2A tokens ICO**
- STeX A2A ICO is scheduled to April, 5 2018 05:00 GMT. Do not miss the opportunity to get A2A tokens with the maximum bonuses from the very beginning and wipe out huge part from your trading commissions! Unlock professional features on STeX holding A2A tokens. Get 50% discount on fees paid in A2A tokens. Enjoy tier structure discount system based on A2A accounting.
- Q2, 2018
Beta release**
- A user-friendly web-based client with the highest level of security access control - taken from real world trading terminals - will provide instant access to the biggest choice of coins and tokens with worldwide best bid & ask. The key concept is this - you'll need just one account to get access to thousands of markets and trading pairs at the lowest rates. Behind the scenes is a fully automated system that takes care of all details. You can choose either segregated storage under your full control and protection or a common account - giving you maximum flexibility and leverage.
- Q3, 2018**
- Additional trading and investment services.

A2A Technology

Our A2A decentralized technology allows us to support thousands of cross rates simultaneously with efficient resource usage. We process all cross-rates in A2A Cloud, with virtually unlimited ability of horizontal scaling.

Imagine an orchestra with a conductor. Each instrument is a separate coin server, playing its own part in the symphony.

The core (conductor) makes them all work together perfectly synchronized. If the core is down, this role is transferred to a spare conductor waiting nearby, or even to one of the musicians.

If some musician is not fast enough to play all the tunes in time, we can add another with the same instrument so that they could share the task. Each task is totally independent and can be performed on a separate server. Or, if need be, on hundreds of such servers. And all that is automated in the STeX Cloud.

A2A tokens are used as an intermediary to evaluate every listed coin and create a matching pair of orders in the system's core.

A2A Tokens

A2A tokens are used as an intermediary in every trade on STeX using A2A technology. The problem is that while working with hundreds of different assets, you need a measurement system to evaluate all the tokens in order to create cross-rates, calculate commissions, do all the internal accounting. So, we used an additional token for that purpose. It was designed with self-balancing supply capabilities ruled by the smart contract on the Ethereum network and internal market making pool in other currencies on STeX platform.

Furthermore, we have a promotional system to attract users and make their trading activities more profitable (especially, for active traders who may suffer from turnaround commissions).

By mixing these two concepts together, we have created a STeX utility token named A2A after the technology Any2Any we invented and used to create 10,000 cross-rates.

The additional utility function of this token is to provide an easy to account tier system for commission discount for all users on the STeX exchange. There are no passive income opportunities, no profit sharing in the A2A token, and, at the same time, it should be very attractive for the users to buy, use and hold in order to get extra discounts and unlock the professional features on STeX which will be available only for professional traders with a sufficient amount of commissions paid to the system.

The A2A tokens supply available during the ICO is limited by 500,000,000 A2A tokens. All undistributed tokens will be burned after the end of the A2A ICO. In case of hard-cap, additional 100,000,000 will be issued for the project owners, bounty, airdrops, partners and market making liquidity pool. Please see chapter 10 for details. There is no soft cap, as the project has all the funds required for completion and almost any amount of the A2A tokens in the circulation is good for the system because of the self-balancing feature.

The A2A token has 8 decimals

A2A token that will give users an opportunity to reduce their trading fees by up to 50% through paying commissions with it, and will increase user's discount based on the amount of the commissions paid to the system and on the amount of time that you hold the token on your account. As a proof of concept, you can look at BNB Binance token which has a similar structure and purpose.

To match cryptocurrency market growth and provide additional long-term stability to the token, we also have a mechanism that balances the prices of the A2A token.

From every commission paid to STeX, 70% of A2A are sold on the open market at current prices and become STeX's income. The remaining 30% are immediately transferred to the smart-contract known as A2A SHOP to be sold from that contract at the all-time high price, 0.1% higher than previous sale from the contract. The funds from the sales of A2A tokens via the smart contract are accounted for as STeX income. It is almost as effective a price balancing system as a buy-and-burn option, but instead of the project's profits in BNB token (which can be unstable, as the exchange may have expences exceeding collected commissions) it is linked to the total trading amount on the STeX platform without the necessity of burning.

When the price of A2A goes down (and it will at some point, as it is a free market), the circulation supply will be temporarily reduced every day by the 30% from daily commissions paid to the exchange. Lower A2A prices will result in bigger absolute amounts of A2A transferred to the smart contract. In an extreme case, the demand for A2A, needed to be bought to process the ongoing transactions, can exceed the total circulation supply and the price will immediately rise to the level of the current sale price in the A2A SHOP. This system gives us an assurance that any A2A dump will be simply a perfect trading opportunity, and the token itself might become a very attractive trading instrument.

A2A Token holders' benefits

> A2A token holders can get a discount of up to 50% if they pay fees on STeX platform in A2A tokens from their internal A2A balance.

In the first year of operations ALL users will get a 50% discount regardless of the conditions, and in the following years such unconditional discount will be as follows:

	Default discount for all users	Maximum Discount
Year 1	50%	50%
Year 2	35%	50%
Year 3	25%	50%
Year 4	20%	50%
Year 5 and over	10%	50%

Unlike some similar tokens (BNB, for example) A2A tokens will never lose all their discount potential and will stay attractive for the users. The maximum 50% discount will always be available for the users meeting special conditions to unlock higher discount rates, like the amount and time of the A2A tokens being held, the amount of daily and/or monthly commissions paid, etc.

Additionally, we expect A2A token to be seen as an attractive short- and long-term trading asset, which will increase the demand as well.

A2A Token ICO

10.1 ICO Terms And Conditions

The rules, the conditions and the duration of each of the ICO Stages will be described at <https://stex.exchange/ico> before the beginning of the each stage. All Ethereum transactions in the amount less than 0.1 ETH will be rejected by our smart-contract.

A2A is a native token in STeX platform, the safest way to keep them is to hold on your STeX exchange account (full KYC verification is recommended). Also, the A2A tokens are issued on the Ethereum blockchain by the ERC20 smart-contract during the ICO in exchange of ETH received by the smart-contract, and will be send to your address immediately after the ETH transfer within same transaction.

Also, you can buy A2A tokens with Bitcoins, Dash, zCash, Ripple using instructions on the <https://stex.exchange/ico> page. Tokens can be credited to your STeX account or to your Ethereum address.

You can start using A2A tokens on your STeX account for paying commissions with discount immediately after it will be credited with A2A tokens. However, free token transfers in blockchain are restricted till the end of the ICO.

10.2 ICO Tokens distribution

In addition to the amount of the A2A tokens exchanged during the ICO process for the different cryptocurrencies and tokens, 10% of such exchanged amount of A2A tokens will be issued and distributed between STeX project owners.

On top of the described amount, 10% of the amount of the A2A tokens exchanged during the ICO process are reserved for bounty, airdrops, advisors and strategic partners of the STeX project.

The minimum amount of 200,000,000 A2A tokens must be exchanged during the ICO. If the desired amount will not be reached during the ICO, the market making pool will be topped up with all undistributed A2A tokens remained to reach this 200,000,000 limit and will be reserved in the market making pool for the future distributions in response to the future userbase growth.

In case there are some undistributed tokens left at the end of the ICO, 5% of the total final supply will be donated to the market making pool on STeX Exchange and other exchanges to provide sufficient liquidity for A2A tokens on the market and the rest will be burned at the end of the ICO.

Considering all the above, the total number of the A2A tokens available for exchange during the ICO is 500,000,000. The maximum total supply in case the ICO will be hard-capped is 600,000,000 A2A tokens.

Use of ICO Funds

Below is the intended use of funds collected during the ICO. It is based on the assumption that at least 30,000 ETH will be collected during the ICO. Final proportions may differ due to the fixed costs in some cases.

25% - Liquidity pool

15% - Research, development
and infrastructure

10% - Legalization

20% - Project marketing (partnership
program, bounty program, special
promotion campaigns, corporate
promotional activities)

15% - ICO marketing (partnership
program, bounty program, special
promotion campaigns, existing
agreements)

10% - A2A Market Making pool

5% - Contingency fund

● Liquidity pool

● Project marketing

● Research & development

● ICO marketing

● Legalization

● A2A Market Making pool

● Contingency fund

Legalization

Smart Token Exchange Ltd was incorporated in Saint Vincent and the Grenadines, due it being the fastest jurisdiction in which to incorporate that kind of business. However, to be able to make fiat deposits and withdrawals, we need to incorporate legal entities in the EU, USA and many other countries, and get all the necessary licenses according to the local laws and regulations.

We expect this process to be completed in 3-5 years from launch. Many procedures must be in place including well trained staff to fit regulators requirements.

The Team

We are trading professionals with years of experience in developing sophisticated trading algorithms for private hedge funds and brokers. We have profound understanding of all the needs of professional traders and we are not satisfied by what we can get out of the current market state in cryptocurrency exchange and trading.

We are a strong and experienced team both in technical terms and in building successful startups. Each member has a unique character trait that, when combined together with those of other members, creates a perfect synergy. This ensures that the probability of our success is very high. We have years of demonstratable experience in this field and are eager to put that to use in the ambitious STeX project.

**Nicholas
Price**

CEO and CTO

36 years old. A founder of the renowned KeyCAPTCHA (www.keycaptcha.com) which was a candidate for buyout by Google, Nick worked as a technical director, architect and a team lead. Since its creation in October 2010 KeyCAPTCHA project has had 99.99% uptime up to the present. It has more than 40 million users a month and protects more than 20,000 sites from spammers around the globe. KeyCAPTCHA is being used by well-known companies such as TeamViewer, ESET, BinDB, Bethesda (publisher of Fallout, Doom, Elder games), SamMobile (one of the world's largest portals about smartphones).

A computer genius. Started programming when he was nine years old. Programming Languages: C++ (GNU C, Watcom), C#, Assembler x86 (including x64, SSE, MMX), Python, PHP, JavaScript, Transact SQL, SQL, ECLiPSe Prolog, MQL (4,5), Delphi, HTML5, CSS3.

Database management systems: MS SQL, MySQL, PostgreSQL, MongoDB, Cassandra, LevelDB, CouchDB. Including working with large volumes of data.

Web servers: Nginx, Apache. Virtualization: Microsoft Azure, VMWare, HYPER-V. Other skills: NoSQL, MapReduce, Django and other Python frameworks, NodeJS, jQuery, Bootstrap, Blockchain, Neural Networks, Parallel computing, Big Data, Data Mining.

Large experience in developing cross-platform applications for Windows, Mac, Linux and mobile applications for Android and iPhone.

Has experience in the design and implementation of highly loaded systems (horizontal scaling - millions of users per day). Deep knowledge in the development of cryptocurrency inter-exchange arbitration systems. Highly experienced in management of large databases (billions of records, hundreds of gigabytes).

From 2013 until present, Nick has been working on lead generation service in VK social network (Electron(NodeJS) + Python(Django) + MySQL). As well as optimizing high load systems to work with databases having billions of entries in social graphs.

Ivan
Mityaev

CFO Compliance and
Legal Department

43 years old. CFO, Compliance and Legal Department, experience in crisis management, building successful startups and marketing. In the last 10 years Ivan developed many projects from websites network to vast variety of stock trading instruments for private companies, including backtesters, statistical analysis tools and so on. Managed online retail distribution networks for various businesses from 2008-2016. Ivan catches the gist on the fly, is absolutely balanced emotionally and has the ability to focus on multiple tasks simultaneously and find non-standard solutions.

Expert in market-making activities, development of HFT algorithms, stress testing of trading systems, bias-free backtesting, practical knowledge of statistics, quantitative trading methods, profound technical analysis, deep understanding of market cycles, value and growth investor, algo-trader, php, c++ programmer.

Although Ivan does not tend to be a public person, some of his webinars on statistical trading and practical use of genetic evolutionary algorithms in developing trading systems can be found on Youtube.

**Maksim
Vladykin**

CPO and
Project Manager

Maxim is the person who will be responsible for timing, resources and the projects' risks. This is where he can be trusted - due to having over 12 years experience in this field. It is important to note that all the projects for which Max was responsible were all delivered on time and became profitable.

36 years old, project manager. He possesses the unique ability to systematize and sort out any chaos. He managed development teams for companies in various fields; from web studios to the banking sector. He is the co-founder of KeyCAPTCHA service. Max has known Nikolas Prays for 21 years and during this period an unprecedented level of mutual understanding has developed between the two.

In KeyCAPTCHA, Max served as CBDO and Product manager. From the significant achievements in the project, one can note the entry into the largest Russian accelerator IIDF as well as buyout negotiations with Google.

Max also managed the development of a large banking software with distributed database, which was successfully implemented and operated in 4 regions of Russia, located at a distance of 4000 km from each other.

Expert: Team building, Project management, Scrum, Lean Startup, Help Desk, Risk management, Team motivation, Conflict resolution.

Advisors

**Serguei
Popov**

Professor of the University of Campinas, Brazil
PHD in Math

Serguei Popov is also one of the founders of IOTA and WINGS projects.

He will advise on stochastic processes (in particular, discrete-time Markov chains and Brownian motion) for market modeling.

Serguei is a research mathematician working in the field of Stochastic Processes and living in Brazil. He became interested in crypto in the end of 2013, and made a number of contributions to the theoretical aspects of the Nxt cryptocurrency and PoS in general. More research publications from Prof. Popov can be found here.

**Mark
Zhong**

Expert in Unix system, IT PM, MBA, Six Sigma Green Belt Project Leader

More than 14 years UNIX admin and IT project management experience in fortune 500 MNC (like HP).

Mark has experience in many big telecom level projects, based on Linux cluster and Oracle DB to support 20 Million users above. And once played a key role in a Hugh IT Data Center migration project in USA, Help moved 5000 UNIX servers and 30 EMC storage clusters from San Jose to Vegas in 3 days.

**Gigi
Janelidze**

Expert in UI/UX and design
Ex Art Director / Lead Designer in Yandex.
Head and co-founder of the TOPOS Studio.

Gigi will advise STeX on how to build its tools and interfaces with a user-first approach.

Gigi has a proven track record of bringing professional and engaging products to life across many different industries. He is able to quickly detect potential usability and UX issues at a glance even before a product goes out to testing - a skill that STeX will make use of to consistently deliver top-notch products on or before schedule. Gigi has worked closely with the STeX team already, delivering a top-quality whitepaper and website design.

The Project

The key concept is this - you'll need just one account to get access to thousands of markets and trading pairs at the lowest rates. Behind the scenes is a fully automated system that takes care of all details. You can choose either segregated storage under your full control and protection or a common account - giving you maximum flexibility and leverage.

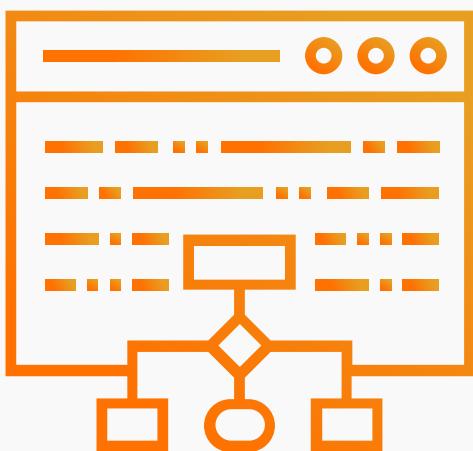

Our idea is simple yet extremely complex at the same time. We are going to bring the full force and scope of traditional financial market instruments to cryptocurrency. Liquidity. Cross-rates. Futures. Leverage. Options. An out-of-the-box, all in one trading platform for Investors and Managers.

More importantly, we will bring freedom to traders by providing them with the tools to choose any role they desire in this new reality.

Whether you want a simple coin-to-coin exchange or intraday trading - we will provide planet-wide best rates for thousands of trading pairs - as well as much better liquidity than has ever been seen before. Our sophisticated arbitrage algorithms and unique platform architecture make sure of it.

A user-friendly web-based interface with the highest level of security access control, taken from real-world trading terminals, will provide instant access to the biggest choice of coins and tokens with worldwide best bid & ask prices.

We are going to bring futures and options to cryptocurrency trading. If you are new to financial markets - this provides a more professional and effective way of trading securities than direct-trade, because of built-in leverage. With futures you can open a position in a coin - covering just a fraction of it as a deposit - and still keep 100% of the profits.

Open your own asset management business in just one click - or choose one to invest in. Scan the market for successful traders and managers with your own criteria - or set your own rules to attract investors - in a fully secured and protected platform. The business model is simple and more secure than most known blockchain-based projects.

FAQ: How it Works

1

Which wallet should I use to store tokens?

A2A is a crosschain token issued on STeX platform and Ethereum blockchain. Token holders can easily store and manage their A2A tokens using existing Ethereum clients including official Ethereum wallets like MyEtherWallet, Metamask, Parity, Mist or Ledger (hardware wallet) or keep them on their STeX accounts.

2

Can I participate in the ICO without creating an Ethereum address?

Yes, you can hold A2A tokens on your STeX Exchange account forever, you will be able to withdraw A2A tokens to the supported blockchains any time you want.

3

Can I participate in the crowdsale from my exchange wallet?

Don't send currencies from an exchange! If you do so, you may not be able to retrieve your tokens.

4

Can I buy A2A tokens by BTC or other cryptocurrency instead of ETH?

Yes, please read the instructions on the ICO page:
<https://stex.exchange/ico>

5

Can U.S. or Hong Kong citizens participate in the token sale event? What about residents of other countries?

No, as far as we know residents of the United States can't participate in the A2A tokens distribution because of the US laws. You can participate in the STeX ICO if you are neither a Hong Kong or U.S. citizen or permanent resident of the United States, nor have a primary residence or domicile in the United States, including Puerto Rico, the U.S. Virgin Islands, and any other overseas territories of the United States.

Additionaly, as we have no ability to check participants residency because of blockchain technology used in Ethereum network, and/or their country regulations, final decision about legal ability to join this project as an A2A token holder must be made by participants themselves.

6

Will tokens be available on the exchanges after the ICO ends?

Yes, right after ICO end A2A become tradable at STeX exchange against all listed coins and later on some other exchanges.

7

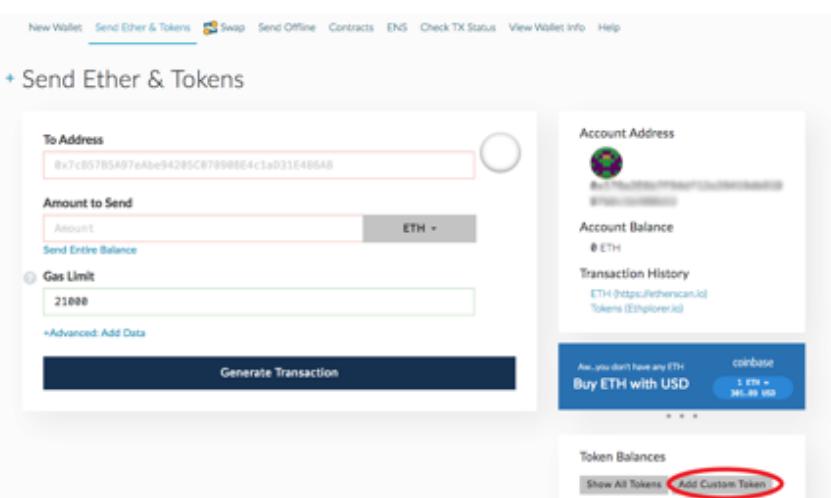

There is no Adress (like country, living adress)?

Smart Token Exchange Ltd was incorporated in SVG.

8

How to add A2A tokens to MyEtherWallet?

Push on the "Add Custom Token" button

Fill the form and push on the “Save” button

Address: 0xaE56*****6Fda

Symbol: A2A

Decimals: 8

Show All Tokens Add Custom Token

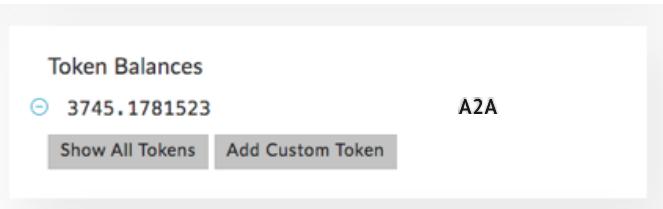

Address 

Token Symbol

Decimals

Save

Now you can see balance in MyEtherWallet!

9

What if you won't sell all tokens?

Unsold extra tokens will be burned after the ICO.
