EXECUTIVE SUMMARY

In the United States, there is a very limited selection of trusted platforms that traders can use to trade cryptocurrencies.

Introduction

In recent times the interest for trading and investing in cryptocurrencies has dramatically increased as has the average person's fervor for getting involved in the potential investment opportunities. The move to global digital ledgers and cryptocurrencies is being ushered in by the general public and these next Sale traders clamor for blockchain related technologies rather than Wall Street stocks as investment opportunities as they expand their portfolios. First to market cryptocurrency exchanges have facilitated this huge boom that has made cryptocurrency a common term that arises in conversations at picnic tables and even at the family dinner table.

CASE STUDY

STEPS TO BUY Ripple coins (XRP)

EXECUTIVE SUMMARY

Problem

In the United States, there are a very limited selection of trusted platforms that traders can use to trade cryptocurrencies.

These existing exchanges are slow to add currencies for trade and traders have little to no say in what cryptocurrencies may ultimately be added to the respective exchange(s).

Additionally, current US exchanges offer high transaction fees, slow transaction times, and little investment opportunity for average traders that want to invest.

For traders that want to explore the alternative coin markets, the process is very cumbersome.

First, the trader must convert FIAT currencies to cryptocurrencies (this process incurs transaction fees). They then must transfer the procured cryptocurrencies to less trusted and non-US regulated exchanges which can be highly risky.

Once on these exchanges, they trader can purchase alternative currencies (paying additional transaction fees).

Finally, to convert the alternative currencies back to FIAT, they must then transfer the coins back to an accepted cryptocurrency on the US based exchange (more transaction fees) and finally make a last exchange back to FIAT.

EXECUTIVE SUMMARY

COINSTOCKS.

The new platform US based, to exchange crypto currencies safely.

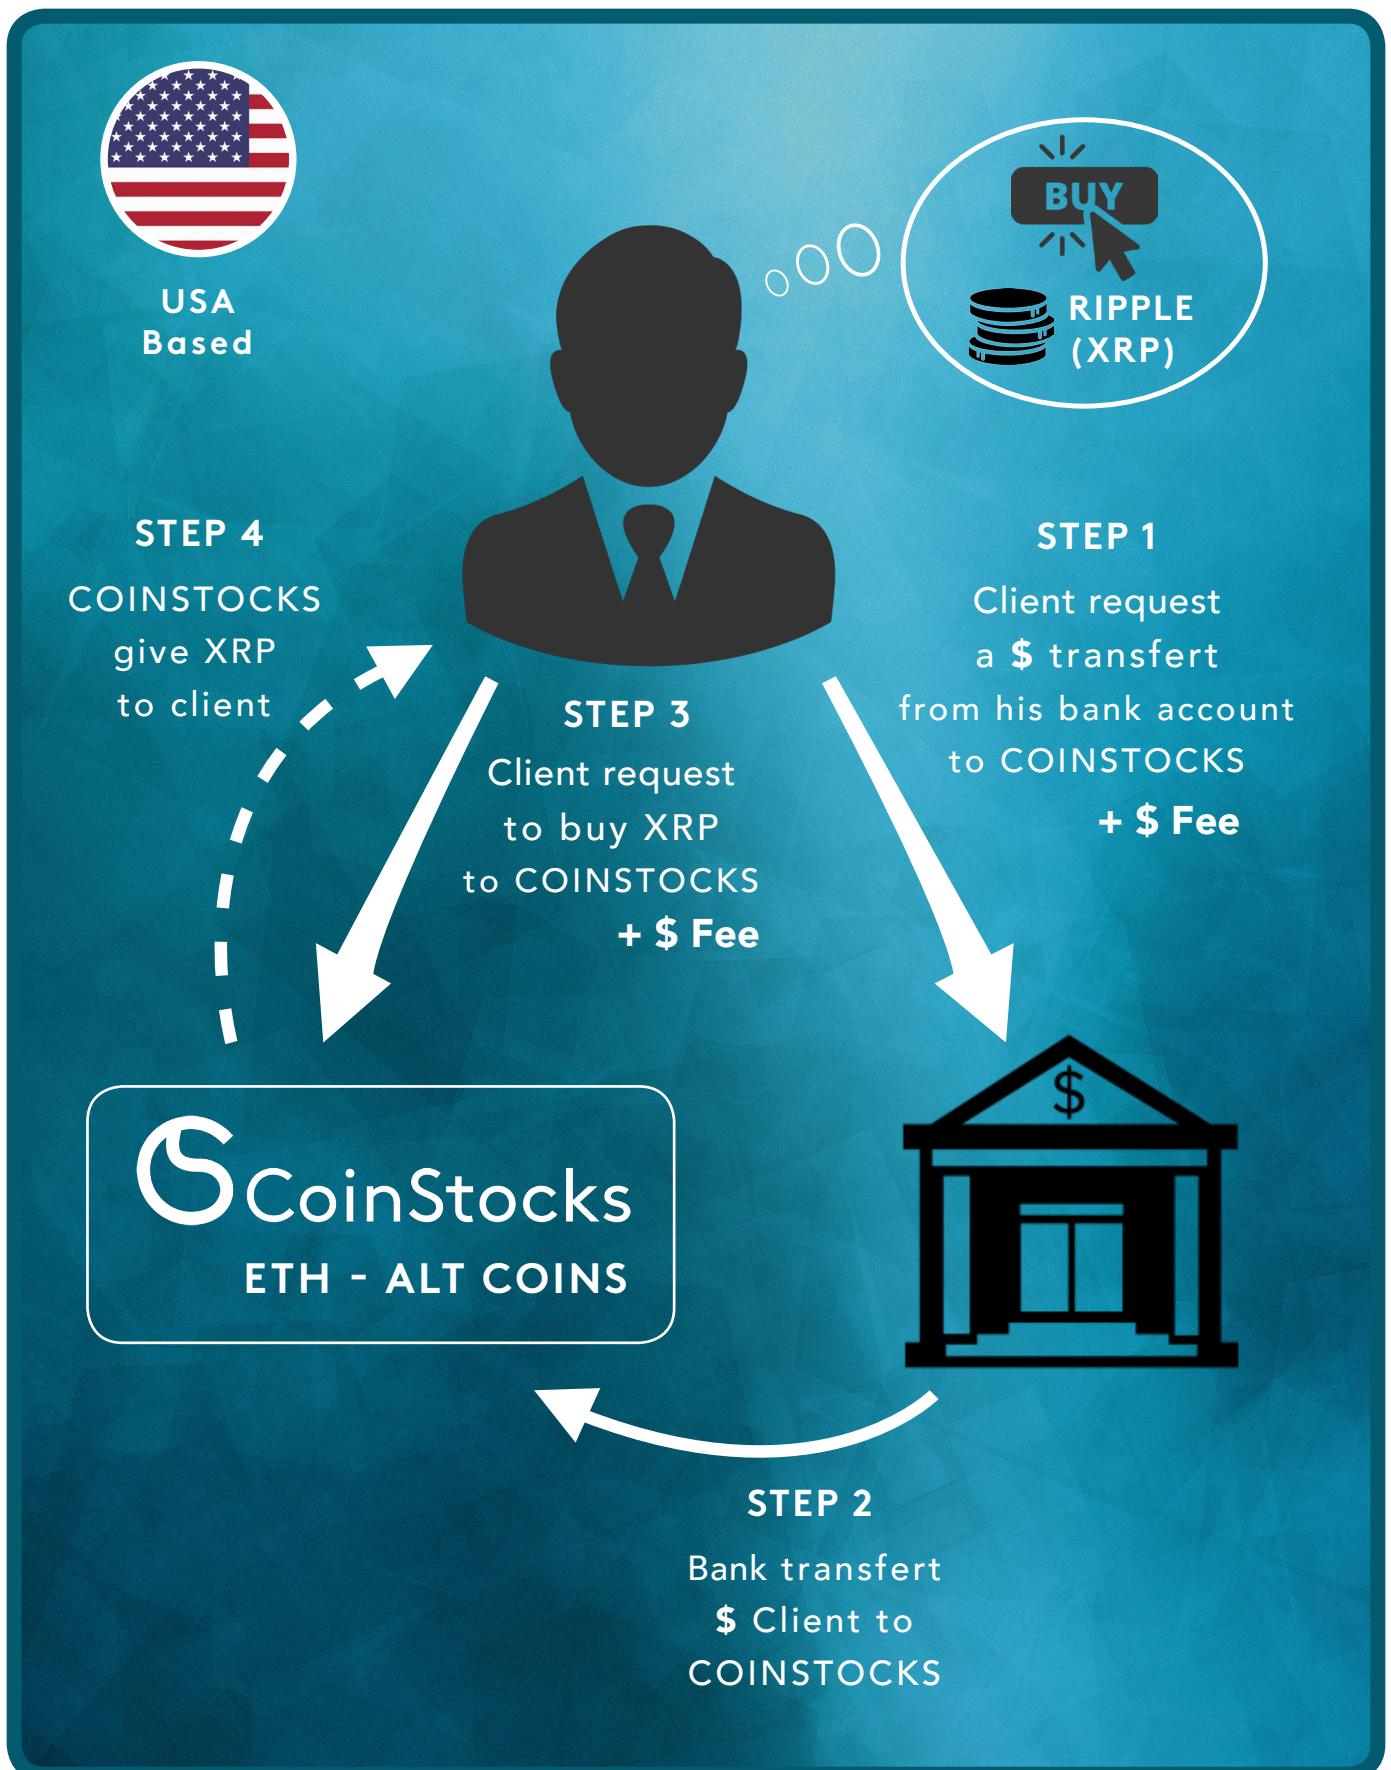

Solution

Coinstocks, LLC has created a US based cryptocurrency platform that will allow for any level of investor, trader, or crypto currency enthusiast to try their hand at increasing their cryptocurrency portfolios. Our platform has an easy to use interface, is designed to be highly scalable, is built upon trusted technology, is secure, offers dynamic pairing of cryptocurrency transactions, carries low transaction fees, specializes in

alternative coin transfers, and has a voting platform which will allow its user base to directly influence which cryptocurrencies become available for trading. Additionally, Coinstocks is highly transparent to its user base and has 24/7 support as one of the top priorities for handling issues, should they arise (an area that has been lacking with many of the larger exchanges).

EXECUTIVE SUMMARY

PRODUCT

The Coinstocks platform is the collective of systems and services that manage:

1. the trading interactions between users,
2. facilitating the dynamic trade transactions between coin pairings,
3. and interact directly with the FIAT gateway.

Participants

Early Backers (First 25,000 users)

These participants were eager enthusiasts of the project that agreed to sign up when the trading platform was in its infancy. They were granted the highest level of IOX incentive for signing up and in return provided feedback on simple spelling and grammatical errors, obvious bugs, functional feature suggestions, and general feedback on the concept of building another US based exchange which focused on dynamic pairing of alternative coins/tokens. Additionally, these participants conducted Beta Phase 1 and provided feedback in exchange for bounties that were identified. The bounties were offered as follows:

REPORTS

Participants

Beta Phase 2 (25,001 - 100,000 users)

These users are eager to test the improved functional features of the platform. They have been following the progress of the development efforts via the community channels and are passionate about the success of the platform.

TSE backers

These purchasers will be granted access to the Beta site for exploration in exchange for purchase of the IOX utility token. Additionally, they will be granted early access to the trading platform once it goes live and will be able to use their purchased tokens towards the transaction fees associated with trades executed.

Community

These participants will be users that are granted registration abilities once the trading platform goes live.

Coinstocks User Stories

Secure User Sign Up/Sign In

This is a core feature of most modern day websites. With Coinstocks, the user signs in by registering and entering all of the required sign up information. They will then be sent an email to the address they provided which they must use to confirm their account. From this point on, when the user wishes to login they will enter their credentials and a secure verification token will be sent to their email. This token must be used quickly as it is rapidly expired for security purposes.

User Legal Form Data Submission

Personal data should be entered (and is required upon Withdrawal) so that Coinstocks can comply with Know Your Customer (KYC) and Anti Money Laundering (AML) regulations. This data includes date of birth, social security portions, address, country, and other data as required. Our data is kept securely on the Coinstocks platform.

Wallets

Each currency that is available for trade on the platform requires a wallet that is created and managed as a part of the Coinstocks platform. Users are able to view the latest market overview per coin, details about the users respective portfolio, allows for deposits and withdrawals, allows for trade execution, and shows activity history for the particular currency.

Performing Trades

Cryptocurrency trading is the fundamental feature of the platform. A user that has either earned currency or made a deposit selects the cryptocurrency that they want to trade and the coin they would like to receive in exchange for that coin. They also specify the amounts of each coin to be traded. They can specify in the trade offering a percentage of available coins or directly enter the amount. Advanced traders can specify a custom unit price and provide a date in which the trade will expire. Once the trade is submitted, progress can be viewed. These trade transactions can be filled either partially or in their entirety depending on other user's trade offerings, as well as prevailing marketing conditions.

SOLUTION & PRODUCT FEATURES

The core features of this platform give it a unique edge above other exchanges. Cointstocks has blended the ease of use of existing US based exchanges with offerings of alternative cryptocurrencies and the facilitation of exchanges via a FIAT gateway. In this section, we will delve into these core features further.

Alternative Coins

Additionally, the ability to customize the number of required confirmations of the blockchain and proof of work algorithms can significantly speed up the end-to-end transaction times. Additionally, some of these coins take advantage of smart contracts, a key feature of Ethereum-Based tokens.

Because of all of these advances in coins over Bitcoin, these alternative coins are cheaper and can help traders expand their cryptocurrency portfolios. Due to the reduced cost of many of these coins, buying and selling these coins can be affordable for a much larger market of traders. The success of Bitcoin as a digital

peer-to-peer currency fueled a movement among technological projects. Many more coins were subsequently developed and enhanced using the fundamental framework, technologies, and inspiration of Bitcoin as their guide. These next Sale variant coins developed were created as an alternative to Bitcoin implementing features that: implemented fixes for lessons learned, provided transaction optimizations and customizations, and reduced costs and associated fees. Alternative coins can be far less expensive to purchase and in many cases incur lower transaction fees.

US Based

Many cryptocurrency exchanges exist, however, currently very few are US based exchanges and even fewer offer a FIAT gateway. For US residents, there is a level of trust that is automatically granted to the US based exchanges because of the licensing, regulations, and compliance measures that are imposed. Of the 50 states and the District of Columbia, 48 U.S jurisdictions require cryptocurrency exchanges to be licensed as does the United States Federal government. There is also a level of transparency available to the public since business information is a matter of public record.

Of the US based exchanges, few alternate coins are offered on the respective trading platforms so in order to purchase, sell, and support these alternate currencies users have to withdraw funds from trusted exchanges (incurring additional transaction fees) and settle for using higher risk exchanges with unknown regulations. Many users that support Coinstocks have expressed a huge interest in being able to trade these alternate coins on a US based exchange and not have to transfer funds to internationally based exchanges with unknown regulations and little transparency.

At Coinstocks, we understand the security of the funds stored in an exchange is crucial to its adoption and credibility in the cryptocurrency community.

Security

Both of the founders have been involved in the security space for years and are well versed in security concerns.

Below is an overview of the security measure that will be put in place to protect everyone's assets.

- Any person with access to any of our infrastructure will need to pass a level 2 expanded background check and renew it every six months.
- Access to any servers will need to be done in a controlled manner, videotaped and requiring tandem biometric access with at least 2 security specialists.
- The production platform will only hold 20% of the total assets in our hot wallets. The remaining funds deposited will be automatically transferred to our cold wallet and will have to be manually moved to the exchange as needed by withdrawals and enforced by a smart contract.
- On top of hiring third-party pentesters, a full pen testing team will be employed full time.
- A security bounty program will be in place to reward any white hat efforts.
- Each private key, is encrypted using multiple keys that are never stored on the same device.
- Anomaly detection automation and Kill Switch.

Cold Contract

For Ethereum and their respective tokens, coinstocks has developed a unique technology that we call "Cold Contract".

Instead of using a regular wallet, we built on top of the multi-signature wallet approach to protect against any unauthorized withdrawal. We will minimize the attack surface usually required for multi-signature solutions by optimizing the decision tree for this process withdrawn process.

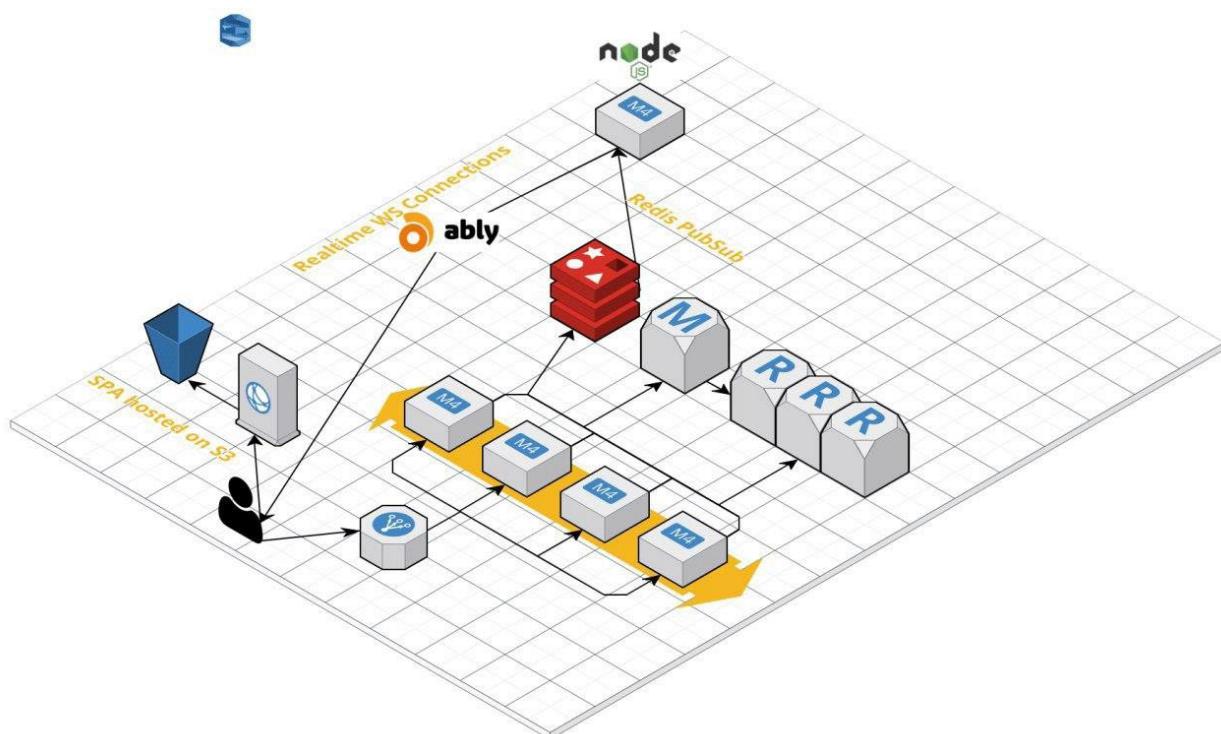

Education

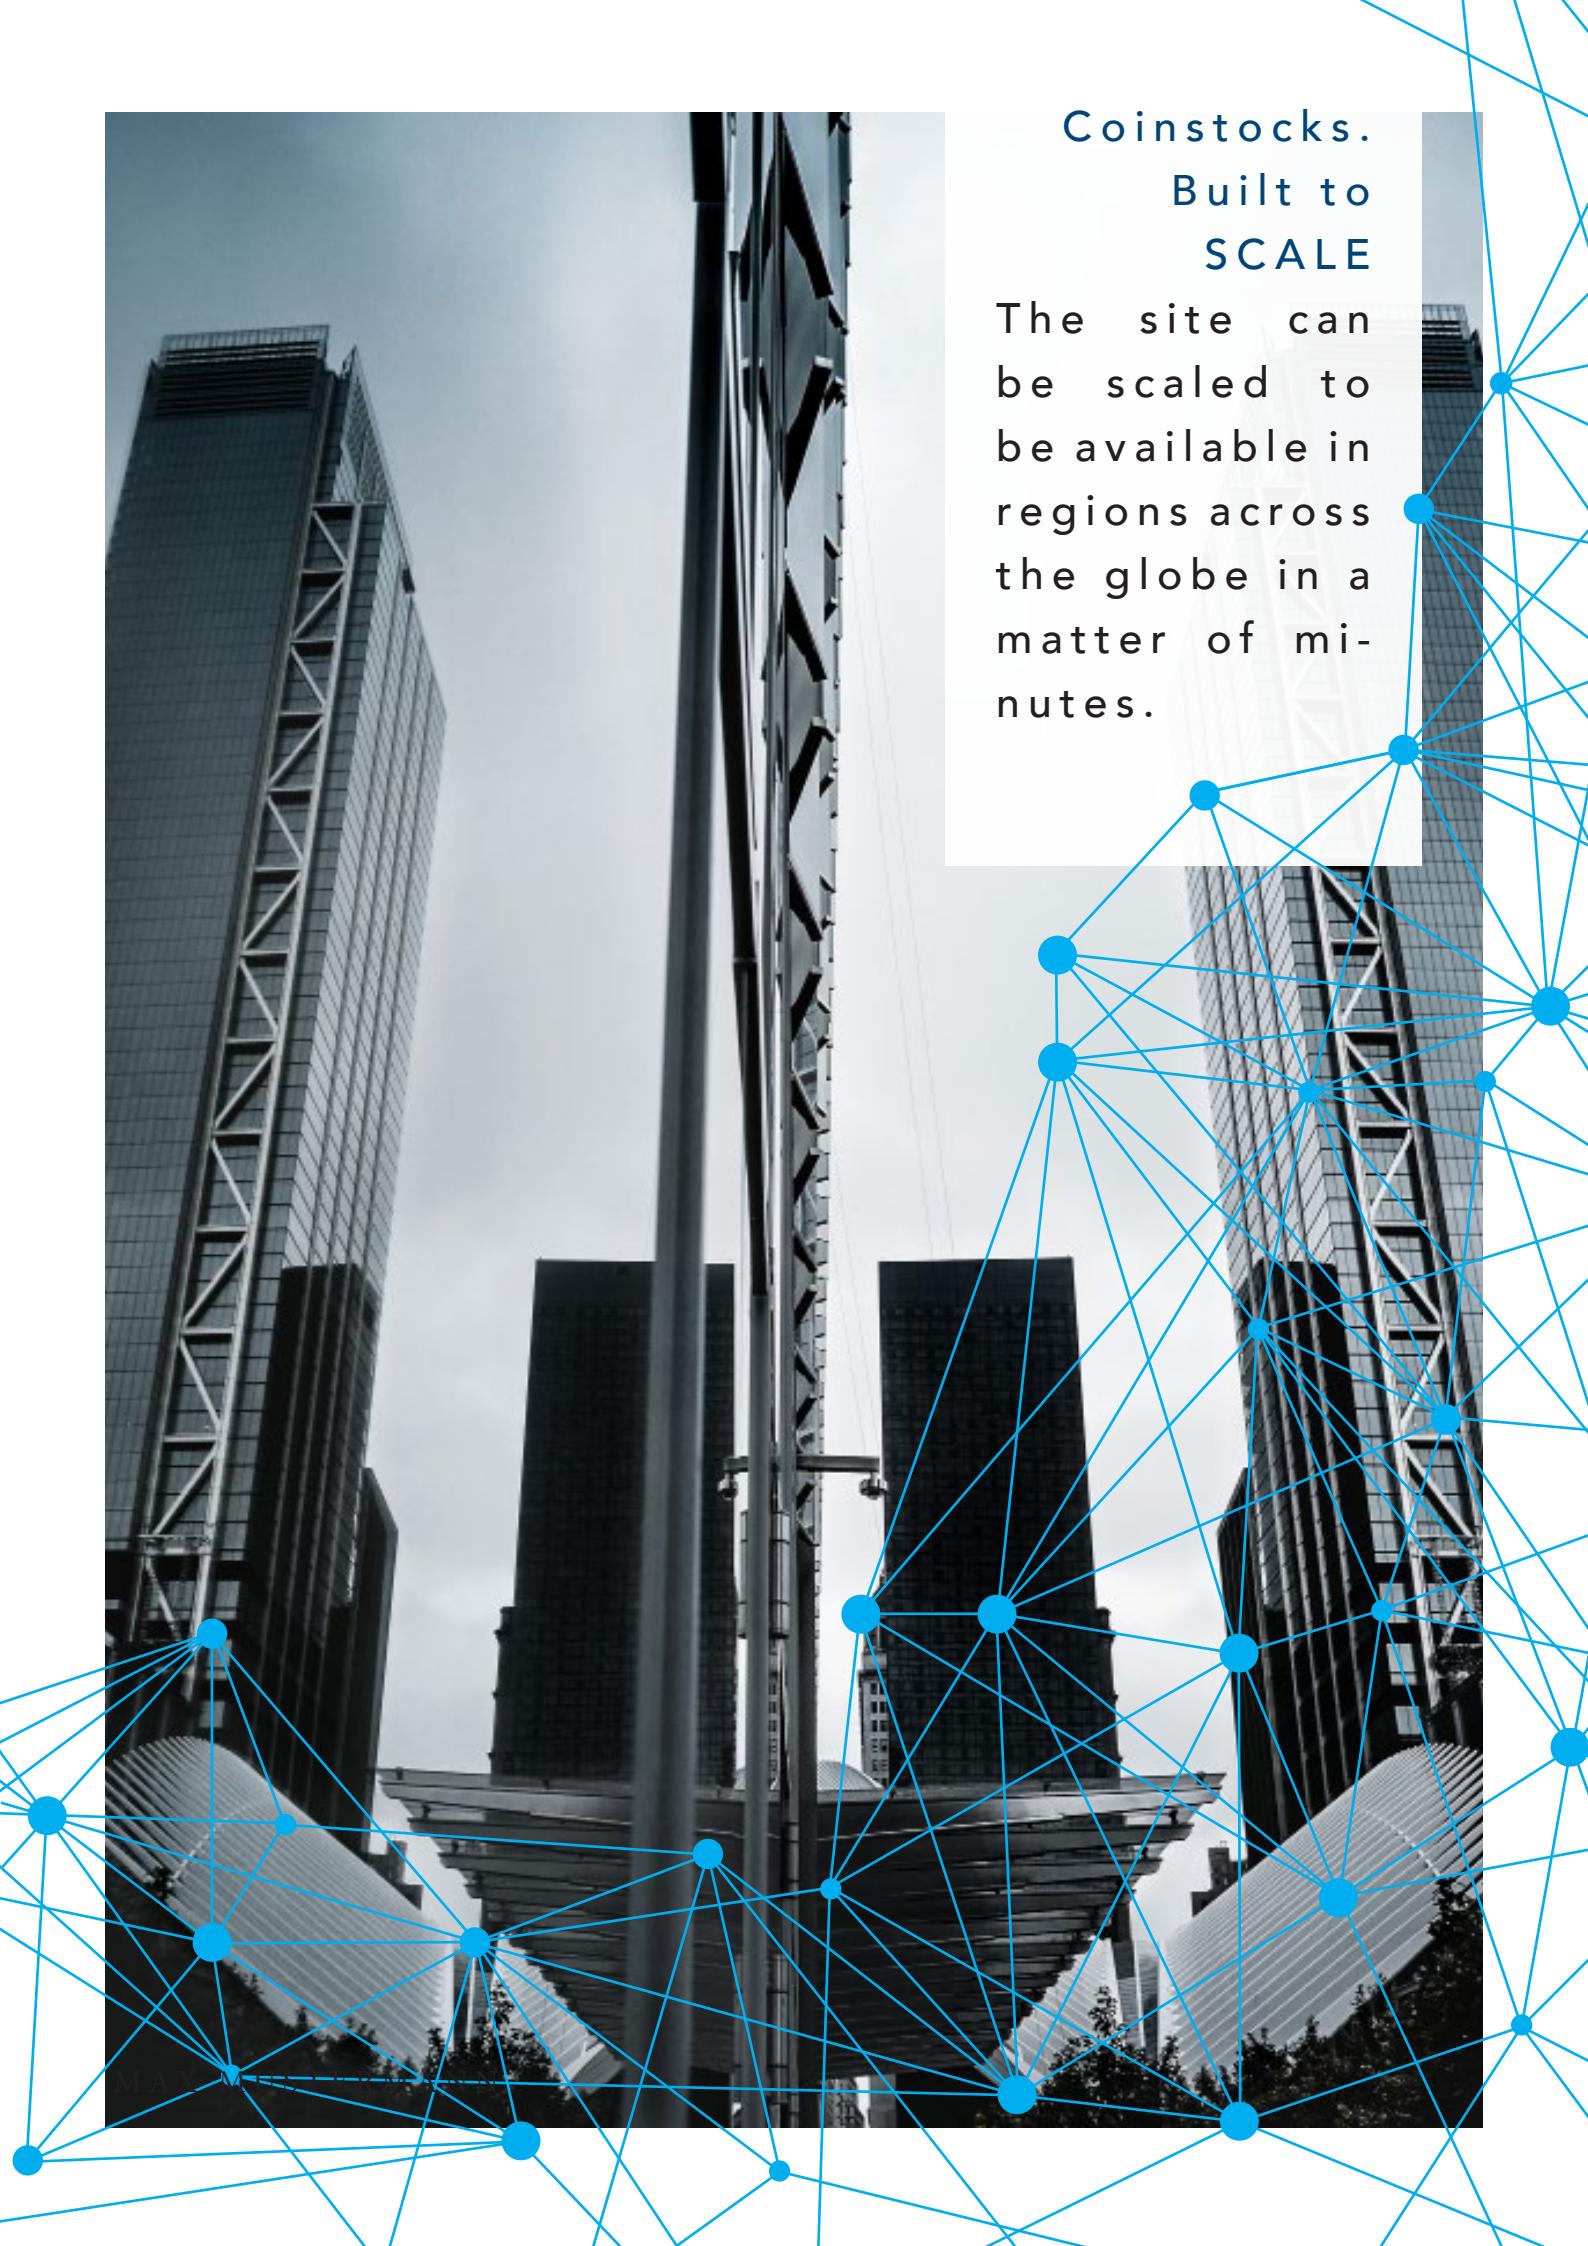

We at Coinstocks will do everything in our power to protect the funds, we also have a mission to educate our users and teach them how to use personal paper wallets for proper secure long-term storage.

Built to Scale

The Coinstocks processes have been designed from the ground up to be highly scalable and support real-time information updating. The end users navigate through the site from a variety of platforms. Coinstocks is accessible from both desktop and mobile platforms and makes supporting mobile technologies a priority. The site can be scaled to be available in regions across the globe in a matter of minutes. Additionally, the frontend and backend processes can be horizontally scaled with a few mouse clicks. The database is expandable in data volume, processing capacity, memory

consumption and is capable of scaling across worldwide regions. Caching is essential for keeping the website and data display rendering highly performant. The caching server is also indefinitely scalable. Third party software and APIs are used to perform critical functions in the system. These components offer service level agreements (SLAs) which define a maximum level of uptime for their services, ensuring that Coinstocks services remain uninterrupted and are available to its customers 24 hours a day, 7 days a week.

Coinstocks. Built to **SCALE**

The site can be scaled to be available in regions across the globe in a matter of minutes.

Community

Many exchanges put supporting their user base as a lower priority item. Stories of unsatisfied exchange customers run rampant through social media sites. Often, the only way to interact with support is by submitting a ticket or filling out a form on the website. The ticket gets an immediate recognition email acknowledging the receipt of the issue, but they state that it could take several days for a response. In this technology driven age, issues should not take days to respond to. This is why Coinstocks is putting support at the forefront of the priority list.

There are several community channels that users are able to get information from and at times, they may even chat directly with channel admins and developers to get the attention to their issue in near-realtime.

Usersnap

The website itself allows users to submit realtime bug reports on functional issues encountered on the site.

The service takes a snapshot of the active browser session and sends that along with logging information and submits it to the ticketing system. These issues are assigned to developers and tracked to ensure a speedy resolution to the issue is reached.

Other social media sites have been reserved to better serve the community. Additionally, a full support team will be put in place prior to the time of post-Beta release to keep the Coinstocks customer base happy and satisfied with the services of the platform.

USERSNAP

The website allows users to submit bug reports on functional issues encountered on the site. These issues are assigned to developers and tracked to ensure a speedy resolution to the issue is reached.

IAP

Website itself allows users to submit realtime bug reports for functional issues encountered on the site. These issues are assigned to developers and tracked to ensure a speedy resolution to the issue is reached.

DISCORD

<https://discord.gg/k8Ad8K>.

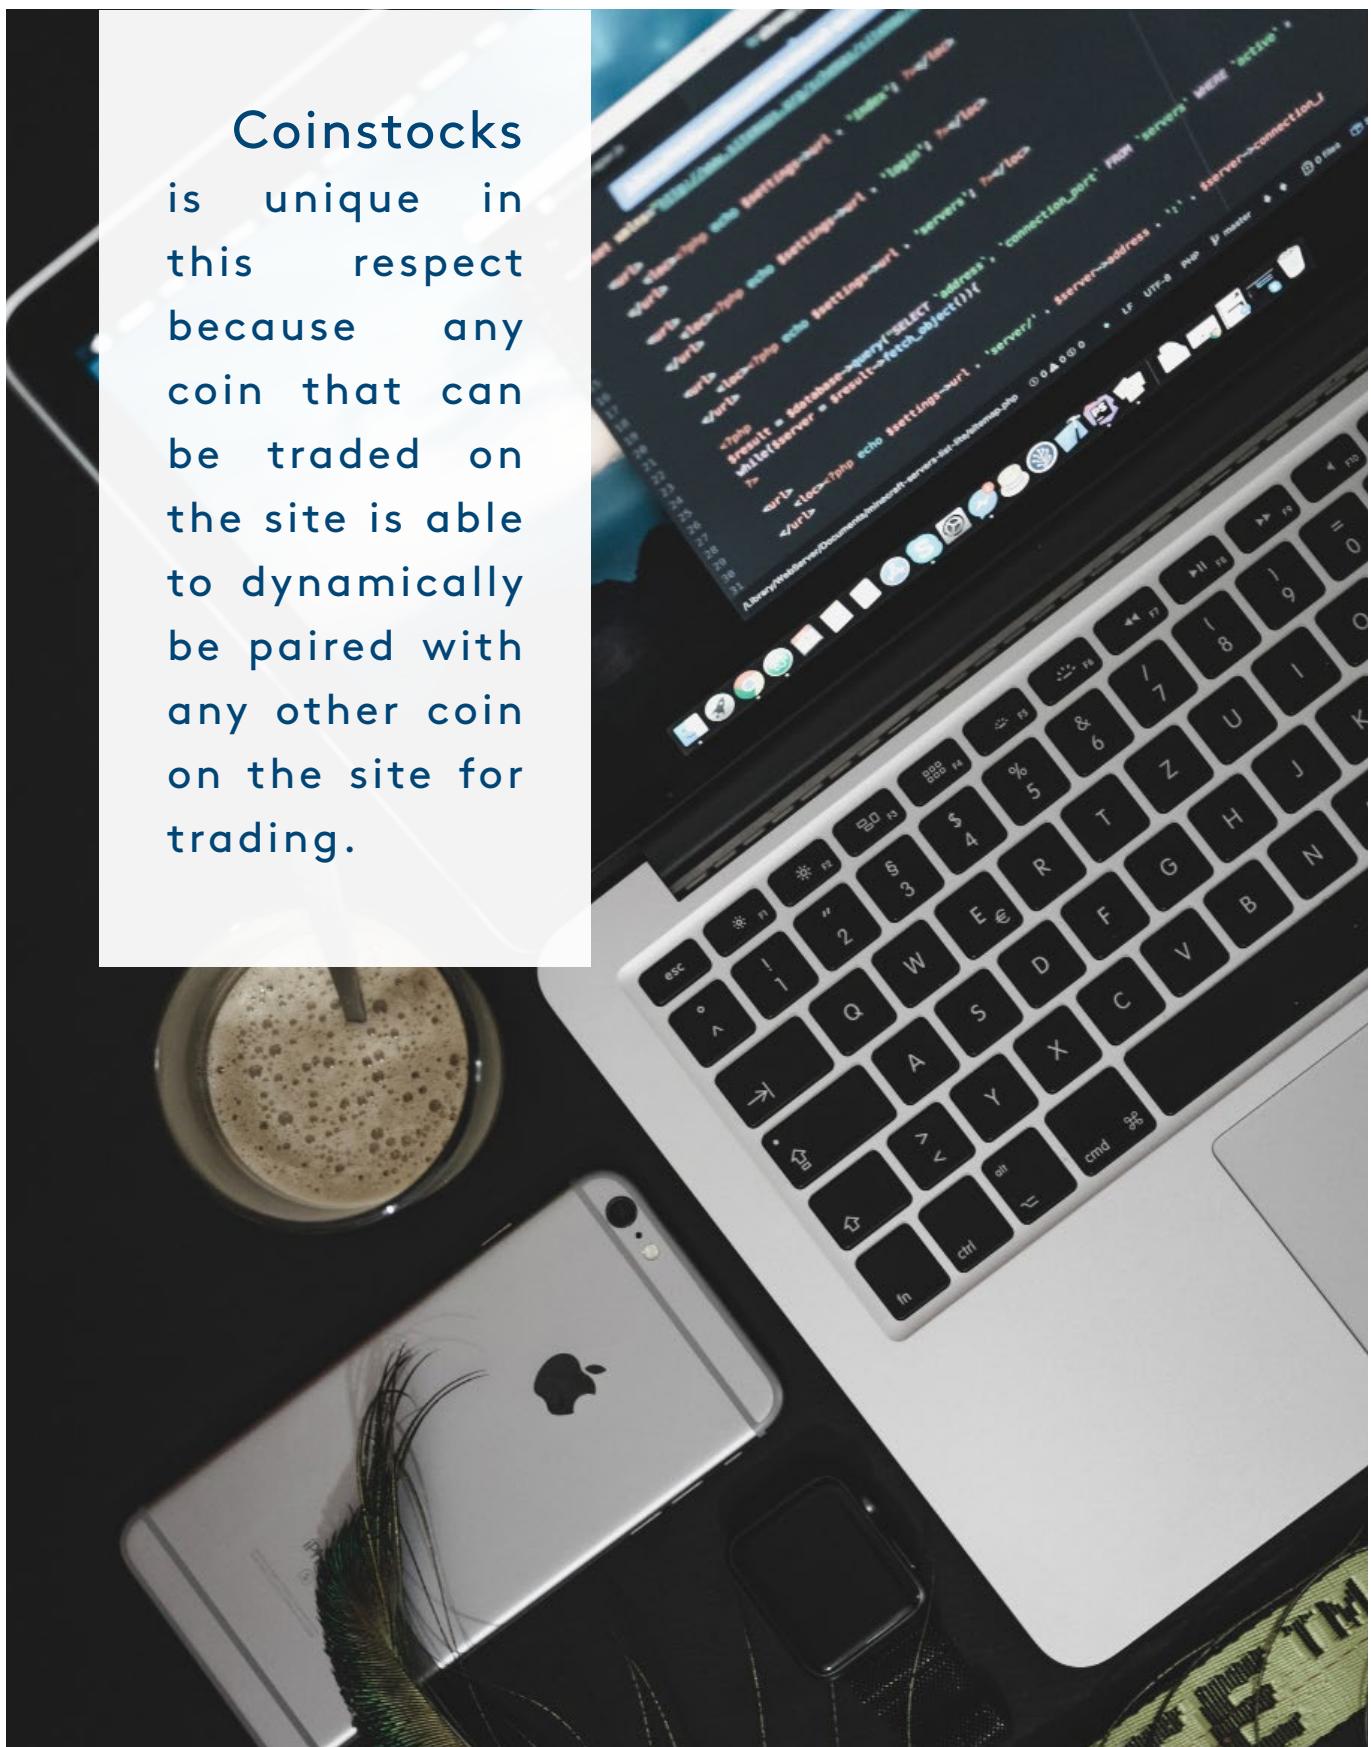

TELEGRAM

The telegram channel link for Coinstocks is:
<https://t.me/coinstocksio>.

Coinstocks is unique in this respect because any coin that can be traded on the site is able to dynamically be paired with any other coin on the site for trading.

Transaction Fees

Coinstocks has offered a couple of fantastic incentives to help reduce or mitigate the incurred transaction fees associated with trading transactions. First, the team conducted market research to assess and define a competitive fee percentage associated with transactions. Second, early backers have been given a lifetime transaction fee percentage reduction. Third, through the early backer, Beta Phases, and with the TSE, IOX tokens have been distributed and can be used directly

towards the transaction fees. Users have many opportunities through the referral bonus and bounty programs to earn IOX tokens, which again can be used directly to pay transaction fees. Lastly, because of the coin offerings available on Coinstocks additional trades between exchanges (requiring additional transaction fees) will be reduced in order to trade coins of higher interest and transfer those via a FIAT gateway.

Dynamic Pairing

Many exchanges only pair alternative coins with certain coins, (e.g. - Bitcoin, Ethereum, Litecoin, USDT, are the most common pairing base coins). Coinstocks is unique in this respect because any coin that can be traded on the site is able to dynamically be paired with any other coin on the site for trading (thus reducing transaction the additional transaction fees required to go from one alternative coin to another). This is a powerful feature that sets Coinstocks apart from most other cryptocurrency trading platforms.

Intelligent User Interface

The user interface of Coinstocks is designed to be fully responsive in all views on a multitude of devices. It is designed to be easy to use for the average person and yet allow more advanced users the ability to make complex trades without an overly cumbersome interface that is hard to navigate and difficult to understand.

FINISHED PRODUCT

TSE purchasers will get Beta access to the site as well as early access to the site once a FIAT gateway is established and the platform is launched for production.

TIMELINE

Inception (Q3, 2017)

Upon inception of Cointstocks, the founders defined the core principles and concepts of the site. Research was conducted to determine which cryptocurrencies should be initially offered for trade on the platform and a proof of concept was developed. In this phase key concepts were researched, for example how to allow for depositing coins, withdrawing coins, and performing dynamically paired trades.

Development (Q4, 2017)

In Q4, 2017 the team identified the features required to have a minimum viable product for initial platform launch. The architecture was designed and implemented to be both horizontally (e.g. - number of instances and regions of deployment) and vertically (e.g. - CPU/RAM/disk/resource/etc.) scalable. Additionally, because security of the site is paramount, penetration testing was performed to reduce risk to the platform users. Because of regulations, it was also important to research laws, licensing, and seek counsel regarding what was permissible in the space of creating a platform which allows for the trade of digital currencies.

BETA Inception (Q1, 2018)

At this stage, Cointstocks LLC was formed by the founders and assets were transitioned to the company. The application for the FinCEN certification was submitted and several small marketing campaigns were conducted to attract a small set of Beta testers. The first stage Airdrop was conducted and was quickly expanded to entice the onslaught of new users that registered as the referral program exploded. Initial research was conducted on what compliance requirements were needed to secure an MSB banking partner. Due to the complexities of the compliance regulations for providing a FIAT gateway, beta was launched on the testnet, rather than on production since FIAT trades will not be available until the banking partner is secured and compliance needs are satisfied.

TIMELINE

TIMELINE

Beta Phase 2 (Q2, 2018)

Word of the Beta Inception quickly spread and the interest was overwhelming. Due to the enthusiastic community, an abundance of feedback was provided. This phase required a window of time to swap out some of the technologies related to realtime trade information, and to optimize scalability of the Cointstocks services.

Token Sale Event (Q2, 2018)

With the overwhelming community interest, it quickly became apparent that additional funds would be required to launch the Cointstocks platform into production. Rather than go the traditional investor avenue, Cointstocks has opted to allow the enthusiastic community to directly contribute to the success of the platform launch by conducting an TSE and allowing the purchase of the IOX utility token. The TSE IOX token sales will provide purchasers early access to the platform upon launch, will allow them to use IOX for transaction fees, and will allow them to trade IOX directly on the Cointstocks exchange for other alternate cryptocurrencies.

Going Live (Q3, 2018)

The target for going live in some regions with the production platform is Q3 of 2018. This will allow for time to: establish a FIAT banking partner, obtain necessary certifications and work with legal counsel to comply with necessary regulatory constraints.

Licensing/Regulations (Q4, 2018)

It is anticipated that the necessary licensing, compliance, certifications, and regulations will be obtained by this milestone.

At coinstocks, we believe that a timeline should be public and that everyone should be able to see the progress that we've made but also what's to come.

Opening a US-based exchange in the US is not a small endeavor, but we firmly believe that with persistence and help from the community we will succeed at making Coinstocks a leading cryptocurrency exchange for the US market.

TOKEN IMPLEMENTATION

The token was created on January 25, 2018 by the Coinstocks founders.

There are a total of 50 million ERC20 mined tokens.

Utility Token

The utilities of the IOX token are as follows:

- To pay fewer transaction fees incurred from executing trades
- Get Early Access to the beta and trading platform
- Vote to add new currencies
- Vote to add new features
- Can be exchanged directly on the platform for other cryptocurrencies

The IOX Token does not constitute an ownership interest in the exchange platform, but rather an irrevocable license to utilize and participate in the exchange.

Contract Location and Details

To provide full transparency of our token, the contract address is freely available on the Cointstocks community forums.

The contract address on etherscan.io is:

<https://etherscan.io/address/0x96995863e238e78c177ddc5a0c462f1c-453fe2ab>.

Token Details

The token was created on January 25, 2018 by the Cointstocks founders. There are a total of 50 million ERC20 mined tokens.

COINSTOCKS

TOKEN DEPLOYMENT PLAN

Development Allocation

10 million IOX are reserved for the founders and early development team and advisors. This IOX amount is expressly reserved for and dispersed to founders and developers as designated by the founders.

Bounties, Referrals, and Bonuses

Approximately 10 million IOX are dispersed to early users who participated in our beta and bug bounty programs, as well as for referrals.

Beta testers are granted accordingly:

- 500 IOX for the first 2000 users that signed up.
- 250 IOX for the next 3000 users that signed up.
- 100 IOX for the 40,000 users that signed up.

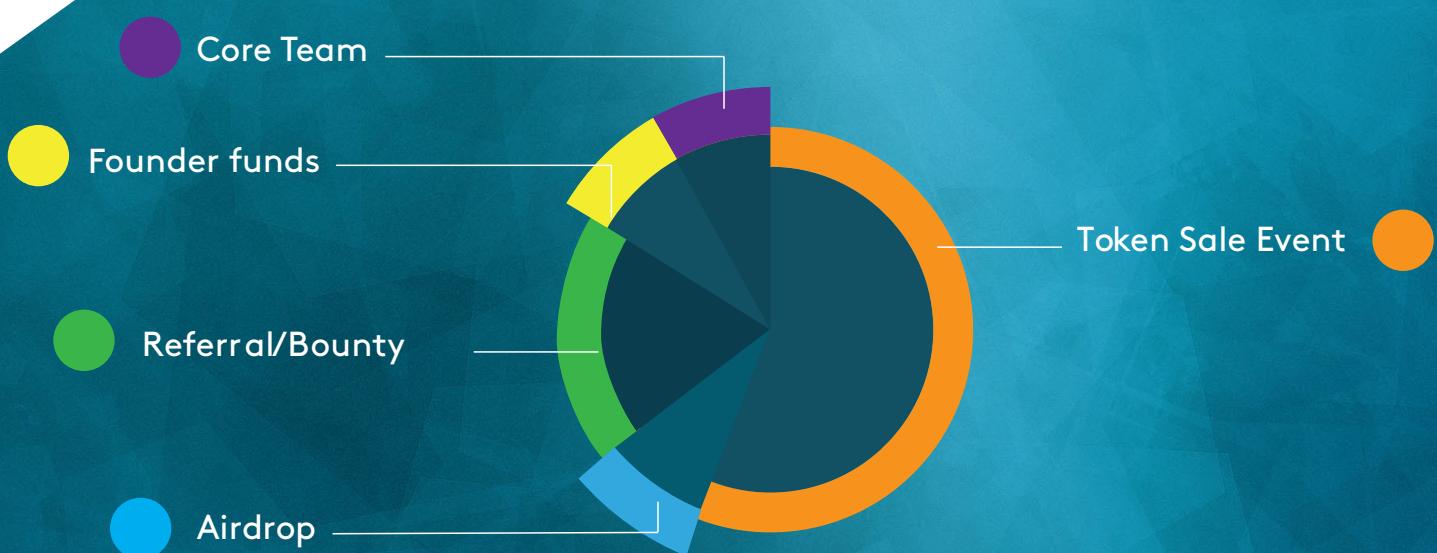

Beta users are also awarded for discovering bugs and testing functionality of the website. Users are granted 50 IOX per referral until the 10 million quota is reached.

TOKEN DEPLOYMENT PLAN

Token Sale Event

25 million IOX are reserved for TSE participants.

TOKEN DISTRIBUTION

SEGMENT	AMOUNT	PERCENTAGE
Token Sale Event	25M	50%
Referral/Bounty	9.75M	19,50%
Founder funds	5M	10%
Airdrop	5.25M	10,50%
Core Team	5M	10%
TOTAL	50M	100%

What is a Token Sale Event?

A Token Sale Event is a way of raising funds by selling a utility token to early adopters.

IOX is Cointstocks exclusive utility token, that will allow users to:

- Save 50% on transaction fees.
- Vote on adding new altcoins to the exchange.
- Vote on new features.
- Early Access to the beta and the exchange platform when it opens.

Cointstocks has decided to sell 25M IOX in preparation for the next phase of our development.

You can now go to cointstocks.io/token-sale to signup and pre-order your IOX before they run out.

Each IOX costs 0.0007 ETH with a minimum purchase of 0.07 ETH.

Why are doing a Token Sale Event

To be a world-class cryptocurrency exchange in the US, we need to comply with regulations across all 50 states as well as the world. The legal cost for this alone will be substantial. We want to be the best in our game when it comes to security and develop an exchange everyone can use confidently. We plan to put in place a 24/7 support team. We want to continue to improve cointstocks based on your constant feedback.

The Token Sale Event will allow us to do all that and more in the near future.

FULLUS
COMPLIANCE

How will the funds be used

A successful Token Sale Event should allow us to raise 17 500 ETH.

Those funds are required for:

- Legal Counsel to get proper licensing on a federal and state level.
- Pay for security bonds.
- Pay for Licensing applications and renewals.
- Hire a support team so we can guarantee 24/7 support to our members.
- Marketing
- Security & Pen Testing
- Grow our development team

We estimate that we need at least 25% of the desired sell amount, to go forward with the project. If after the end of our Token Sale Event we did not sell enough, all contributions will be refunded. If we do not raise the maximum amount but the soft cap is reached we might have to review the timeline with less aggressive goals

You can read more about the Token Sale Detail in our Circular that can be found at coinstocks.io/token-sale

Referral Program

Our referral program proved so popular that we decided to extend a similar system for our TSE. Each purchaser will receive 10% Bonus IOX on all referral who complete a purchase. We've set aside 2 million IOX tokens for the referral program. First come, first serve! Take advantage of this before all the bonus tokens are claimed.

You can find your referral link in account panel.

He is honored to be serving as a judge for the TV Academy Emmy Awards since 2015, and was one of the recipients of a 2011 Engineering Emmy Award for Yahoo's role in ushering in the new era of Smart TV.

CONCLUSION

CONCLUSION

Purchasing tokens through this TSE provides the buyer several utilities in using the Cointstocks exchange.

First, the purchaser will be able to use Cointstocks IOX tokens to pay for transaction fees incurred during trading. Secondly, the IOX tokens can be used to vote and establish future coins that will be offered on the Cointstocks platform. Finally, the IOX coin can be traded directly on the Cointstocks platform.

LEGAL DISCLAIMER

Coinstocks, LLC., a limited liability company organized under the laws of the State of Florida ("Coinstocks" or the "Company") and proposing to sell at varying price up to 25,000,000 Ethereum-based cryptographic tokens through an Initial Token Sale or Token Sale Event (the "Token Sale"). The number of tokens to be sold, the purchase price per token and the other terms and conditions of the Token Sale will be determined by discussions between the Company and prospective purchasers. By accepting this White Paper, you agree to receipt of the separate Initial Token Sale Circular describing certain risks association with the Token Sale, and to read and understand the same (the "Circular"). The tokens offered for sale in the Token Sale are speculative and involve a high degree of risk of loss the purchase price. The tokens have not been registered with or approved or disapproved by any securities or commodities regulator in any jurisdiction, nor has any regulatory authority passed on the accuracy or adequacy of the content of this White Paper or the Circular. The Company expressly disclaims any representations to the contrary and have not authorized any third party to make in-kind representations.

This White Paper, and the accompanying Circular, both independently and collectively, do not constitute an offer to sell to, or solicit from, any individual or entity residing in any jurisdiction where such an offer or solicitation of cryptographic tokens or other digital currencies are unlawful. The Token Sale is not being offered to any entities and nations listed on the United States' Office of Foreign Asset Control's Specially Designated Nationals and Blocked Persons List. Each prospective purchaser must comply with all laws and regulations applicable to it, and in force, in any jurisdiction in which the Company offers to sell the tokens in the Token Sale, and such individuals must obtain any necessary consent, approval or permission required to be obtained to participate in the Token Sale where, under applicable law, it is so mandated. The Company shall bear no responsibility for any purchaser's failure to adhere to all laws and regulations applicable to it and in force, during the Token Sale.

LEGAL DISCLAIMER

The Company's outside advisors have opined as to the applicability of prevailing securities laws with respect to the Token Sale. In the event the tokens being sold in the Token Sale are deemed to be "securities," the effect thereof may impair the rights, privileges and value of the tokens. Likewise, the application of such laws may restrict the scope of the Token Sale and enervate the Company's ability to complete the Token Sale. The applicability of securities laws in any jurisdiction may also restrict the transferability and right of resale of the tokens. Moreover, changes in current laws and regulations in the jurisdictions where the Token Sale is occurring may further diminish the value of the tokens offered for sale in the Token Sale. The Company has not received any assurances or opinions regarding the future impact of changes in current laws and regulations.

Nothing contained in this White Paper or the accompanying Circular shall be interpreted as a promise or representation by the Company as to the past or future performance of the Company. Neither the White Paper nor the accompanying Circular are intended to be all-inclusive or contain all the information that one may reasonably rely upon when making an informed decision to purchase the tokens offered in the Token Sale. Each recipient of this White Paper and/or the Circular is responsible for conducting their own due diligence and retaining such professionals necessary to assess the relative risks associated with the Token Sale as well as the applicability of all laws and regulations which may concern the Token Sale. The contents White Paper and Circular do not constitute investment, legal or tax advice.

The information contained White Paper and accompanying Circular is predicated upon certain assumptions of the Company, which are forward-looking in nature and thus are inherently uncertain. Moreover, the White Paper and Circular includes information obtained from trade and other publications which has not been independently verified as to its accuracy. The Company maintains no obligation to update, alter or amend this White Paper or the Circular. Thus, unforeseen risks, uncertainties or other factors may cause actual results to vary wildly from anticipated results or the expected results of any prospective purchaser.

A large, sparse network graph is visible in the background, consisting of numerous small white circular nodes connected by thin white lines, forming a complex web-like structure.

THANK YOU
