About QWIQQ

QWIQQ is a mobile social commerce based on blockchain network. It is a platform for individual sellers and merchants to list and sell their wares. Sellers/Merchants can choose to accept over 10+ types of crypto-currencies. QWIQQ mission is to reinvents the mobile commerce marketplace by using the latest block chain technology and crypto currencies.

Online Marketplace Issues

High listings fee/sale transaction fees

Major marketplace player – eBay rakes in about 8 billion annually from marketplace transaction fees. Most marketplace charges a percentage fee when your item sells. This adds up to a substantial amount in the long run. On QWIQQ, no fees were ever charged to either party, you keep what you receive.

Complex listing process

Most listing process in existing marketplaces are complex and mundane. On QWIQQ, it takes no more than a minute to shoot and list your product. Eliminating most of the unnecessary information.

Just snap, price it, list it & share it.

Online Marketplace Issues

Lack of integration with social media platforms

Selling is all about social media these days. Having to share your listings on all platforms requires ample effort and time. Imagine having listed 100 items on the marketplace and still having to replicate these similar data over several social media accounts to achieve maximum exposure.

Privacy

Personal information such as bank account details are exposed over traditional selling platforms. With the use of crypto currencies, we omit the need to reveal sensitive personal payment information to users.

Online Marketplace Issues

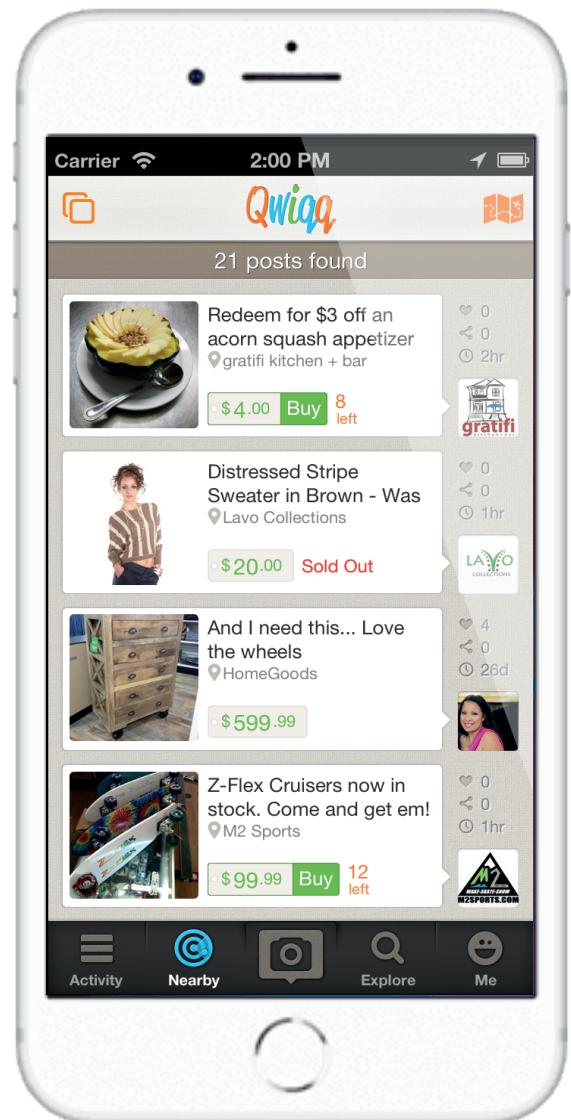

Security

There's no foolproof system to prevent fraud. Individual buyers are susceptible to non-receipt of purchase, faulty/defective goods or even non-authentic goods. The only way they are able to do is to leave a negative review to the seller. Sellers can easily get around this by setting up new accounts and replicate the entire process again.

With the implementation of a internal Escrow system. Payments are only released to buyers upon confirmation on a satisfactory receipt of their purchase. This added security measures safeguards the platform's integrity.

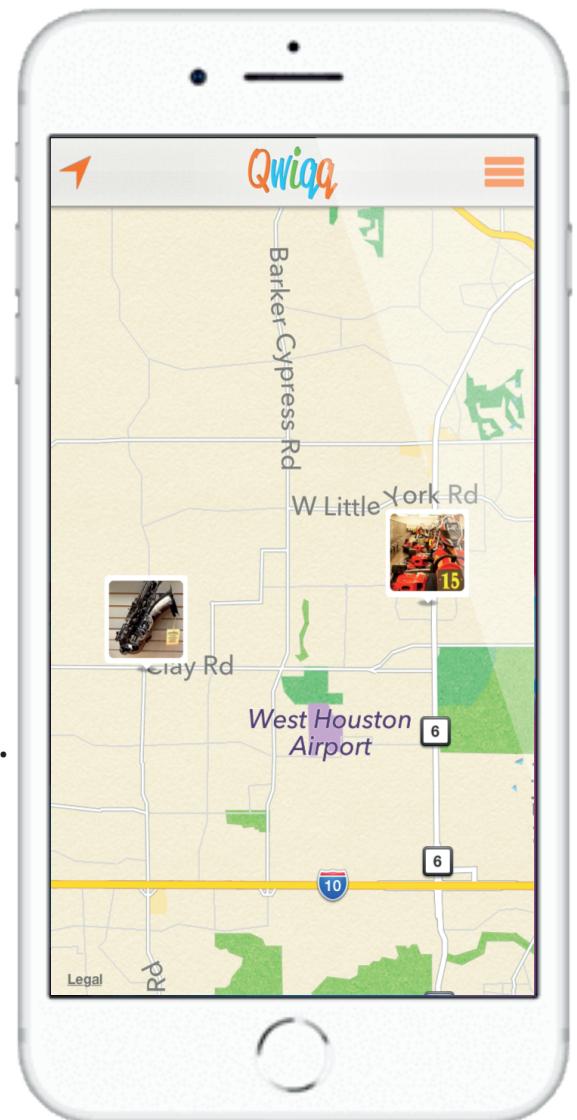

Technological Features

- + Sell and buy in many of the supported crypto-currencies.
- + Explore page lets you to discover and buy what others are selling.
